The Amazingly Enormous STEM Careers Poster

What Can I Do?

What kind of career could a science, technology, engineering or maths (STEM) degree lead to? You might be surprised to know that a degree in biology might help you become a zookeeper, or that mechanical engineering could land you a job in the music industry.

Take a look, on the right, at the jobs and qualifications that 2014's university graduates are doing. Follow the lines to see their degree, and the A-Levels you might need to do to follow in their footsteps. Then talk to your teachers about your GCSE options.

STEM degrees open the door to all sorts of interesting and often lucrative careers, in a wide variety of industries, some quite unexpected! Whether you want to be a manager or a musician, site engineer or football coach, researcher or radio producer, a STEM degree can get you there!
