

## Angles

1. Calculate the gradient of each line below.

(a)

(b)

(c)

(d)

(e)

(f)

2. Calculate the size of angle  $a^\circ$  in each of the following.

(a)

(b)

(c)

(d)

(e)

(f)

3. Find the size of angle  $a^\circ$  that the line joining the points  $A(0,-2)$  and  $B(4\sqrt{3},2)$  makes with the positive direction of the x-axis.

4. A is the point  $(-2, 5\sqrt{3})$  and B is  $(1, 2\sqrt{3})$ . Calculate the size of angle  $a^\circ$ .

5. Find the equation of the line PQ where P is the point  $(-3,0)$  and angle QPO is  $60^\circ$ .

6. Find the equation of the line AB where A is the point  $(-2,5)$  and angle OBA is  $45^\circ$ .

7. The two lines  $y = x + 4$  and  $\sqrt{3}y = x + 11$  are shown in the diagram. Determine the size of the acute angle  $a$ , between these two lines.

8. The lines  $y = 3x + 6$  and  $x + y = 10$  makes angles  $p^\circ$  and  $q^\circ$  with the positive direction of the x-axis, as shown.

Determine the size of the acute angle between the two given lines.

9. The diagram opposite shows the lines  $y = 4x - 5$  and  $y + 2x - 14 = 0$ . Calculate the size of angle  $p^\circ$ .

10. The diagram opposite shows the lines  $y = 2x + 6$  and  $x + y + 8 = 0$ . Determine the size of angle  $a^\circ$ .
