

## Learning for Sustainability professional learning opportunity

**We are offering 24 teachers the opportunity to take part in our 18-month Energy, Enterprise and Environment professional learning programme.**

The programme complements and supports your Eco-Schools Scotland work and helps you meet Learning for Sustainability requirements.

**The programme covers:**

- Climate change and its implications
- How energy is produced
- How to reduce carbon
- How to minimise waste
- How we change behaviours
- Renewable energy and how Scotland can secure clean, green affordable energy

Participants will receive support from energy experts from EDF Energy, inspiring visits to energy production facilities and access to exciting teaching and learning materials via the EDF Pod.

The programme will begin in January 2017 and will include a combination of residentials, twilight sessions and online learning. Participants will complete a practitioner enquiry and organise a community event as part of the professional learning process.

**To find out more about the programme and register your interest please contact:**
