

## Times Table Stepping Stones

1. Create your Stepping Stones by writing numbers 1-10 on different pieces of paper. Create start and finish riverbanks. (See the picture for help)
2. On the floor, place the stepping stones between the start and finish points (they can be placed randomly or in order). The floor is the river!
3. Decide on the times table you are going to practise (in school we focussed on the 2, 3, 4, 5 and 10 times tables and started to learn the 6 and 8 times tables).
4. As you step or jump onto each stepping stone, shout out the answer. For example, if practising the 3 times table, you would shout '15' when standing on the number 5 stone as  $3 \times 5 = 15$ . It's ok if you need thinking time.
5. For an extra challenge, you could
  - include stepping stones with numbers 11 and 12
  - start with the times tables you know well and then challenge yourself with ones you find more tricky or do not know
  - use a stop watch and record the time taken to cross the river. Can you beat your best time?

Try writing out the times table you are practising first to help you. Also see the [Times Table Poster](#) and remember to use your homemade concrete materials or drawings.
