

Early/ First Level Friday Practical Maths Activity

Your Friday practical maths activities are going to focus on patterns for the next few weeks.

Here is a simple example of repeating patterns which use different shapes and colours.

For each row can you figure out what shape/colour comes next?

Can you create some repeating patterns of your own?

Some ways you can do this are-

- by drawing and colouring shapes like the picture above
- while you are out for a walk collect some natural materials and use them

- by drawing different images
- use your Lego or building blocks

Take photos of your interesting patterns and show us on the blog.

Have a go at this patterns game too!
