

PARAMEDIC

A paramedic is a healthcare professional who provides emergency treatment to patients in emergency situations. Paramedics assess and decide what urgent needs a patient has. Their aim is to stabilize a patient's condition until they get to hospital and doctors can give them the treatment they need.

Learn what to do in an emergency situation. Watch the Primary Survey video and the Recovery Position video on the St John Ambulance YouTube channel.

Create a video using iMovie or Clips, demonstrating what you have learned. Alternatively, you can write down, draw and label the steps you must take or create a comic of a superhero paramedic responding to an emergency situation.
