## *Screen capture*

Promethean Screen Capture allows you to capture and crop anything displayed on your panel's screen, enabling you to organically create lessons and activities.

To use Capture, tap **Applications** in the Menu, then the **Capture** from the Applications Menu.

You will see four options: Close, Done, Quick Save, and Save As.

You may use the image in its entirety or use the sizing handles to crop as desired.

Quick save images can be found by opening **Files** or **Gallery** from within the Applications locker.

Selecting the **Save As** option allows you to save to a USB or connected cloud drive.
