

RECYCLABLE PLASTIC BOTTLE LANTERNS

Steps 1-3 should be carried out at home

1. An empty 2ltr plastic bottle will be required
2. Remove the cap/lid and clean the inside and outside – removing any stickers or labels.
3. Cut the top cone of the bottle off so that you have more of a cylinder shape at the bottom and send this part into school with your child.

Steps 4-6 will be carried out in school

4. A hole punch will be used to pop a small hole in either side of the bottle about 2" down from the top. These holes will be used to attach a pipe cleaner handle.
5. Time to get creative! Pupils will use a glue mixture and coloured tissue paper to decorate their lanterns.
6. An electric tea light candle will be added and lanterns will be sent home with pupils to take along to the event.
