

# P4/5 February 2026 Homework:

For the month of February (and beyond!) your homework is to raise a strong and healthy sunflower plant.

In class, you will plant a sunflower seed that you will then take home. Over the course of the month, you should care for your plant making sure it gets the perfect amount of water, sunlight, and warmth for it to thrive.

Keep a diary of when and how you care for it, making a note of the dates and times. You can do this either by writing it down or recording videos and photos.

Your notes should be shared to our class Teams page so others can see and celebrate your progress.

Happy planting!
