How to use these real life array task cards

Thanks for purchasing these real life arrays task cards. I hope your students enjoy using them.

This download contains 24 task cards. Each card shows a picture of a real life multiplication array.

These task cards can be used in a couple of different ways.

1) Firstly you can use them as a matching activity. Cut out all the number cards (found at the end of this resource) and then match the correct number card to each array picture.

2) Secondly, you can use the recording worksheets with these task cards. For each task card, write the multiplication number sentence (e.g. $3 \times 4 = 12$) to describe the array shown.

There are 2 versions of the recording sheet - one blank and one with the boxes for the students to fill in.
