

# Addition to 20 Function Machines

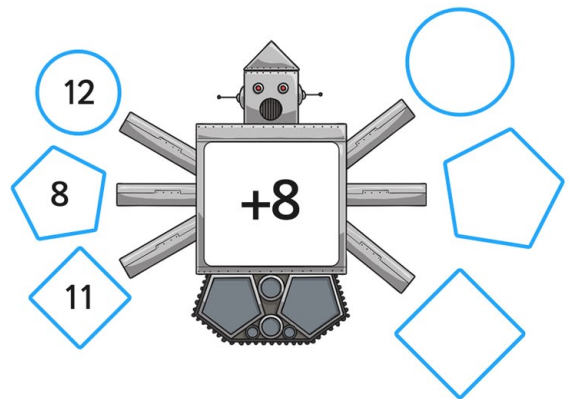

A function machine with a central box containing  $+4$ . On the left, three input shapes are shown: a circle with 5, a pentagon with 7, and a diamond with 9. On the right, three output shapes are shown: a circle with 9, a pentagon, and a diamond.

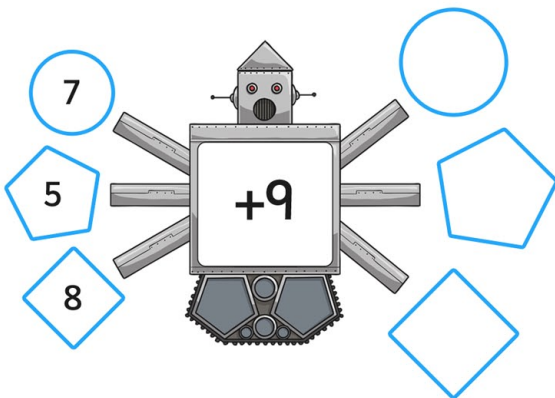

A function machine with a central box containing  $+9$ . On the left, three input shapes are shown: a circle with 2, a pentagon with 7, and a diamond with 9. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.

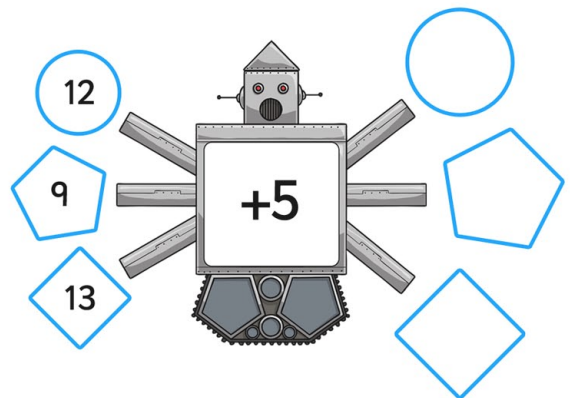

A function machine with a central box containing  $+12$ . On the left, three input shapes are shown: a circle with 6, a pentagon with 3, and a diamond with 8. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.

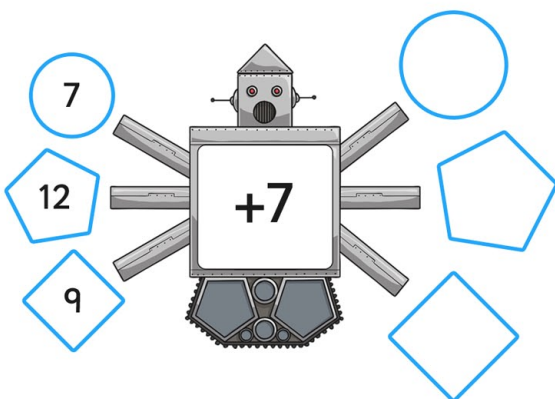

A function machine with a central box containing  $+8$ . On the left, three input shapes are shown: a circle with 12, a pentagon with 8, and a diamond with 11. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.

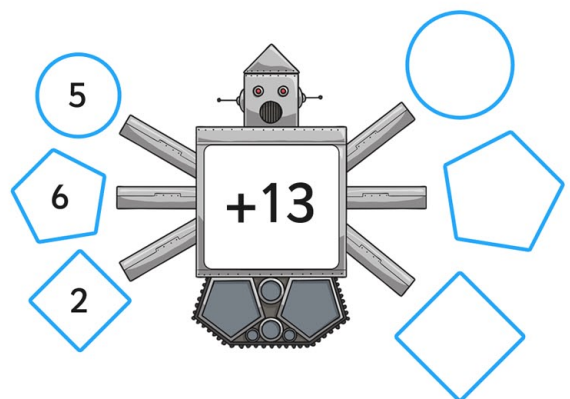

A function machine with a central box containing  $+9$ . On the left, three input shapes are shown: a circle with 7, a pentagon with 5, and a diamond with 8. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.

A function machine with a central box containing  $+5$ . On the left, three input shapes are shown: a circle with 12, a pentagon with 9, and a diamond with 13. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.

A function machine with a central box containing  $+7$ . On the left, three input shapes are shown: a circle with 7, a pentagon with 12, and a diamond with 9. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.

A function machine with a central box containing  $+13$ . On the left, three input shapes are shown: a circle with 5, a pentagon with 6, and a diamond with 2. On the right, three output shapes are shown: a circle, a pentagon, and a diamond.
