

In Science at Mearns...

We do things that are strange and exciting.

We use science in maths, and other subjects.

We use technology to discover.

We work in groups and listen to others ideas.

We learn about scientists and what they do.

We want to learn more about our science topics.

Our minds are opened and we are inspired.

We get to learn about science outdoors and on trips.

We find out about the world around us.

You're doing it, not listening.

We do stuff and want to do it again.

We develop creative, independently thinking scientists with the motivation, knowledge and skills to succeed in a changing world.

Lessons are fully planned and researched, giving confidence in delivery.

Children are inquisitive and encouraged to ask questions (even if teachers don't know the answers).

Children can connect their existing knowledge with what they are learning and real life contexts.

Children are engaged, motivated and enthusiastic about their science learning.

Children apply their science knowledge to other areas of the curriculum.

Children are confident using a variety of science enquiry types to plan and carry out investigations.

We make full use of all our resources, indoors and outdoors. We use technology to enhance science
