

Benjamin Robinson was only 14 years old when he died from second impact syndrome as a result of sustaining a double concussion during a school rugby match in Northern Ireland. Ben sustained his first concussion at the start of the second half but played on for another 25 minutes and was involved in two further heavy collisions. Tragically

recognise the signs of concussion and remove him from the game

Ben's death could have been avoided had someone been able to

The Scottish Rugby Union (SRU) has been leading the way in Scotland in raising the awareness of the signs and symptoms of concussion. Dr James Robson, the SRU's Chief Medical Officer said:

"Concussion is a serious matter. It is the responsibility of all of us to recognise and remove anyone suspected of being concussed."

Dr John MacLean, Medical Officer at the Scottish Football Association said:

"The Scottish FA fully support the implementation of current guidelines for the management of concussion across all sports at all levels and ages. Any sportsman or woman suspected of having concussion should be removed from the field immediately and assessed by a medical practitioner as soon as possible."

Although some sports have higher instances of concussion, it can happen in any sport or recreational activity.

removed from play and must not

on the same day as the suspected resume play in the match or training

concussion.

RECOGNIZE & REMOVE

Concussion should be suspected if one or more of the following visible clues, signs, symptoms or errors in memory questions are present.

1. Visible clues of suspected concussion

Loss of consciousness or responsiveness Lying motionless on ground/Slow to get up Unsteady on feet/Balance problems or falling over/Incoordination Grabbing/Clutching of head Dazed, blank or vacant look Confused/Not aware of plays or events

2. Signs and symptoms of suspected concussion

- Loss of consciousness
- Seizure or convulsion
- Balance problems
- Nausea or vomiting
- Drowsiness
- More emotional
- Irritability
- Fatigue or low energy
- Nervous or anxious
- "Don't feel right"
- Difficulty remembering

- Headache
- Dizziness
- Confusion
- Feeling slowed down
- "Pressure in head"
- Blurred vision
- Sensitivity to light
- Feeling like "in a fog"
- Neck pain
- Sensitivity to noise
- Difficulty concentrating

3. Memory function

questions correctly may suggest a concussion.

- "What venue are we at today?"
- "Which half is it now?"
- "Who scored last in this game?"
- "What team did you play last week I game?"
- "Did your team win the last game?"

Any athlete with a suspected concussion should be IMMEDIATELY REMOVED FROM PLAY, and should not be returned to activity until they are assessed medically. Athletes with a suspected concussion should not be left alone and should not drive a motor vehicle.

It is recommended that, in all cases of suspected concussion, the player is referred to a medical professional for diagnosis and guidance as well as return to play decisions, even if the symptoms resolve.

RED FLAGS

If ANY of the following are reported then the player should be safely and immediately removed from the field. If no qualified medical professional is available, consider transporting by ambulance for urgent medical assessment:

- Athlete complains of neck pain
- Increasing confusion or irritability
- Repeated vomiting
- Seizure or convulsion
- Weakness or tingling/burning in arms or legs
- Deteriorating conscious state
- Severe or increasing headache - Unusual behaviour change
- Double vision

Remember:

- In all cases, the basic principles of first aid (danger, response, airway, breathing, circulation) should be followed.
- Do not attempt to move the player (other than required for airway support) unless trained to do so.
- Do not remove helmet (if present) unless trained to do so.
