

Numeracy

Correction Code

The following correction code will be used when correcting numerical work in all subjects.

A tick should be used where a piece of working is correct and gains a mark

Where a mark is lost, the error should be underlined in red at the point where it first occurs

A cross-tick should be used to indicate “correct” working where a mark is awarded as a result of follow through from an error.

A tilde should be used to indicate a minor transgression which is not being penalised e.g. bad form.

A roof should be used to show that something is missing, such as a crucial step in the working or part of a solution.
