

Volume and Surface Area

Calculating a missing side given the Volume

We are going to learn how to calculate the missing side of a cuboid when we are given the volume.

- Read through all of the notes carefully
- Copy Page 2 into your notes jotter
- Try the questions on Page 3 in your class jotter

Calculating a missing side given the Volume

Page 1

$$\text{Volume} = 120\text{cm}^3$$

How can we calculate the height of the cuboid?

Calculating a missing side given the Volume

Page 2

$$\text{Volume} = 120\text{cm}^3$$

$$H = x\text{cm}$$

$$L = 8\text{cm}$$

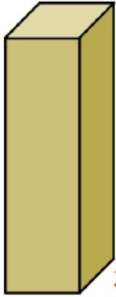

$$B = 5\text{cm}$$

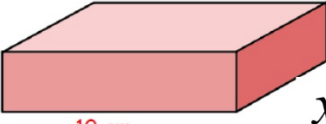

Solution

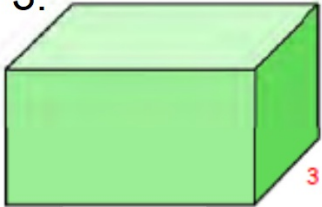

$$\begin{array}{l} V = L \times B \times H \\ 120 = 8 \times 5 \times x \\ 120 = 40 \times x \\ \underline{120} = x \\ 40 \\ x = 3\text{cm} \end{array} \quad \left| \begin{array}{l} \\ \\ \\ \div 40 \end{array} \right.$$

- Write out the formula
- Fill in what you know
- Simplify
- Solve to find x

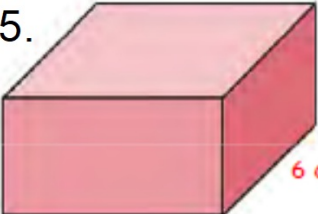

Calculate the missing side for the cuboids shown below

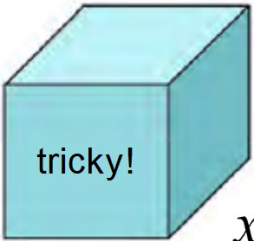

1. 
 $V = 63\text{cm}^3$

2. 
 $V = 200\text{cm}^3$

3. 
 $V = 45\text{cm}^3$

4. 
 $V = 35\text{cm}^3$

5. 
 $V = 90\text{cm}^3$

6. 
 $V = 125\text{cm}^3$
