STEM IN ST. LUKE'S

International Women in Engineering day

On Friday 23rd June a selection of S3, S4 and S6 girls celebrated International Women in Engineering day. The event was supported by STEM ambassadors from across Scotland who kindly offered up their time to share an insight into careers in engineering.

S6 Ambassadors

All S6 pupils who have signed up to be involved with the ambassador program will be involved with My World of Work training to allow pupils to provide the appropriate support to faculties and departments to further enhance their links with FE, HE and industry.

STEM Academy- Maker space

Over the summer holidays the school was successfully awarded a grant from the Institute of Physics to develop a maker space within the school. This will be part of the schools plan on providing targeted interventions for pupils in STEM subjects.

Design Engineer Construct!

St. Luke's has also just secured a partnership with Gardiner & Theobald who will be supporting our new subject Design Engineer Construct. Gardiner & Theobald are a construction and property consultancy who were responsible for projects such as the SSE Hydro and the modernisation of the Burrell Collection.
