

Using iPad or tablet for online learning

Google Classroom works best on a tablet or iPad when you download the apps.

Therefore, you should download the free Google for Education Apps from the app store.

You require:

Google Classroom, Google Slides, Google Docs, Google Sheets and possibly Google Sites.

Once downloaded, click on the Google Classroom app.

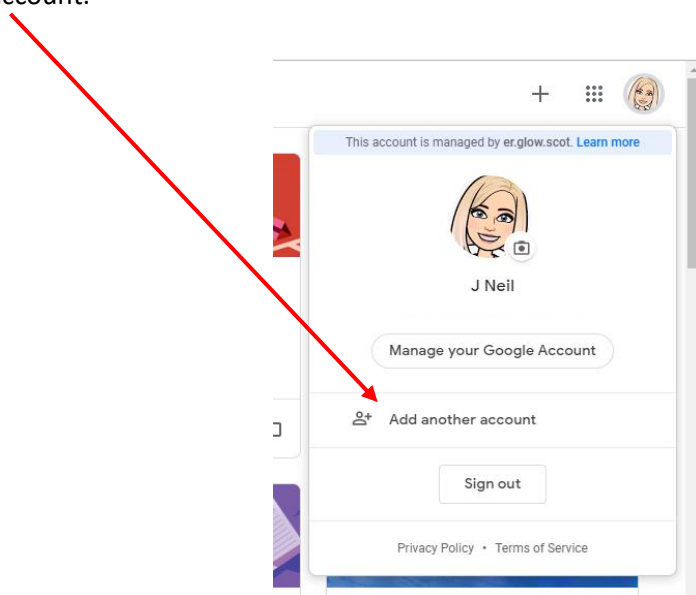

You will be asked to login, your login details will be your glow username with the ending **@er.glow.scot**

(e.g. gw15smithjohn@er.glow.scot)

The first time you log in, you will be directed to the glow login page to input your password. This is the same as the password used in school to login to the Chromebooks.

Once you are logged in, you will be able to access your class page and complete any assignments given.

If you have a Gmail account already logged in to the device that you are using then you may not see your class. If this is the case, click on your user icon in the top right hand corner and select add another account.

Login using your Glow username as described above.
