

An Amazing Fact a Day!

Human Digestive System

Although humans are the only animals that can drink milk as adults, 60% cannot properly digest milk.

Use the Internet or non-fiction books to label and describe the function of the parts of the digestive system.

You could also try to find out:

- which component of milk cannot be digested by some people;
- about the genetic mutation which led to some people being able to digest milk;
- about products which are used as substitutes for milk.
