

## Fossil Fuels

Fossil fuels are made from \_\_\_\_\_ and \_\_\_\_\_ that died millions of years ago. They became \_\_\_\_\_ and eventually turned into fossil fuels. Example of fossil fuels are \_\_\_\_\_, natural gas and \_\_\_\_\_.

Coal is used for all sorts of things including \_\_\_\_\_, tar for roads and dyes. It is also used to make \_\_\_\_\_. Electricity is made by burning the coal to heat water, which makes \_\_\_\_\_, which turns a turbine.

When Gas is burned it gives off \_\_\_\_\_. It is used to cook food and to heat houses and offices.

Oil can also be burned to give off heat, and can be turned into \_\_\_\_\_ to run cars. It can also be turned into \_\_\_\_\_, paints and even \_\_\_\_\_.

Fossil fuels are running \_\_\_\_\_ though, and when they are burned they create \_\_\_\_\_. This is why scientists are looking into other options that do not have the same problems.
