Overview

Section 22.1

Completed

< back to module

Previous Module

In the last Python module, we learned about:

- Computer programs and what they are.
- How to run a Python program.
- Variables and their types, as well as ways to manipulate them.
- How to create and modify lists, tuples, and dictionaries.
- Code comments and where to use them.

If this is not familiar to you, you should go through the Python 1 module before taking this module.

Contents

In this module, we will be covering:

- Conditionals (if statements).
- Loops, including for loops and while loops.
- Functions.
- Getting and using user input.
- Classes and objects.
- Exceptions.
