

24/09/2024

Starter:

Write down everything you know about electricity

Page 3

24/09/2024

Page 3

Learning Intentions:

I am learning about static electricity

Page 3

Success Criteria

- ☐ I can state the two types of charge
- □I can describe what happens when two charges are next to each other

Why...

- Do you sometimes get a "shock" when you close a car door?
- Will a balloon stick to a wall once you've rubbed it on your head?
- Do surfaces sometimes get even dustier once they have been dusted?

Because of Static Electricity!

Positive and negative charges

All substances are made of <u>Atoms</u>. These are often called particles.

Atoms contain even smaller particles called <u>protons</u>, <u>neutrons</u> and <u>electrons</u>. Protons have a <u>positive</u> charge, electrons have a <u>negative</u> charge and neutrons have <u>no</u> charge.

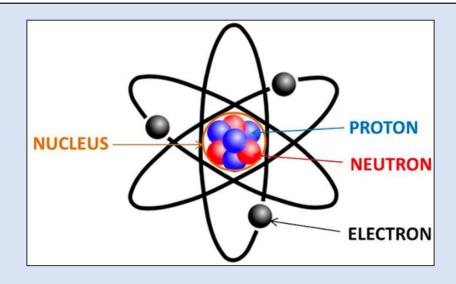

Positive and negative charges

If an atom gains an electron it becomes <u>negatively</u> charged.

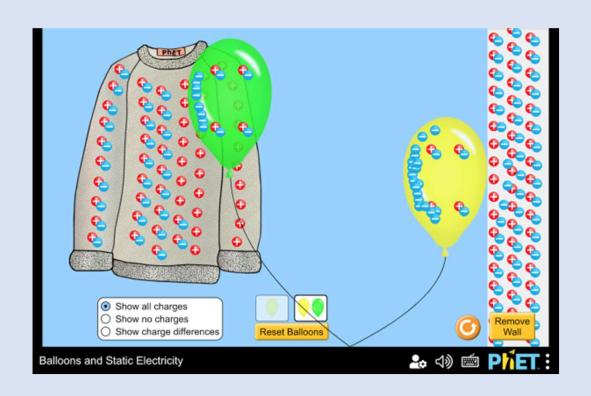

If an atom **loses** an electron it becomes <u>positively</u> charged.

Charged Particles

- Everything has two types of particles in it, positively charged particles and negatively charged particles.
- When two objects rub together, sometimes some of the charges move from one surface to the other. They are then said to be charged.

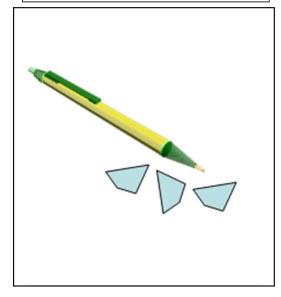

<u>Balloons and Static Electricity</u>
https://phet.colorado.edu/sims/html/balloons-and-static-electricity en.html

<u>Aim:</u> To investigate the effects of static electricity

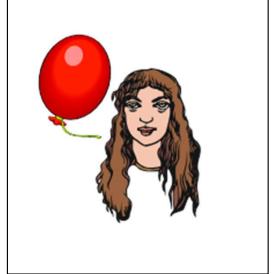

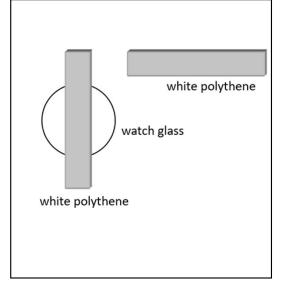

Method:

Experiment 1

Experiment 2

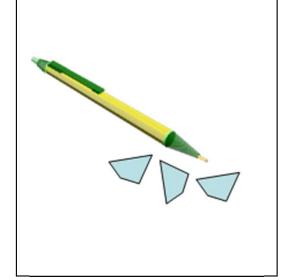

<u>Aim:</u> To investigate the effects of static electricity

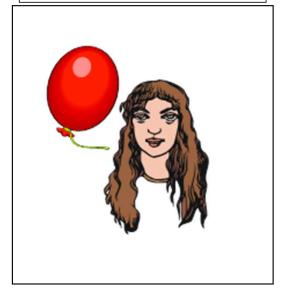

- 1. Rub your pen with a piece of cloth
- 2. Try to pick up small pieces of paper
- 3. Observe what happens

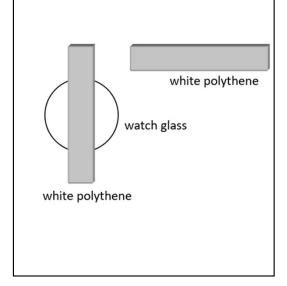

Method:

- 1. Blow up a balloon
- 2. Rub the balloon on your head
- 3. Observe what happens

Method:

- 1. Rub the plastic rod with the cloth
- 2. Place the other rod on top of a watch glass
- 3. Observe what happens when the rods almost touch

Results: answer the following questions

1. What happens with the pen and paper?

3. What happens with the rods?

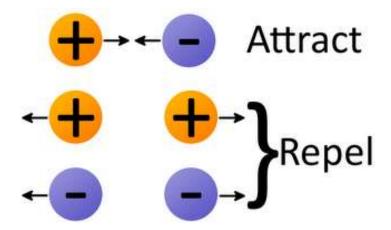

4. Try to explain your answers to the above questions

Conclusion:

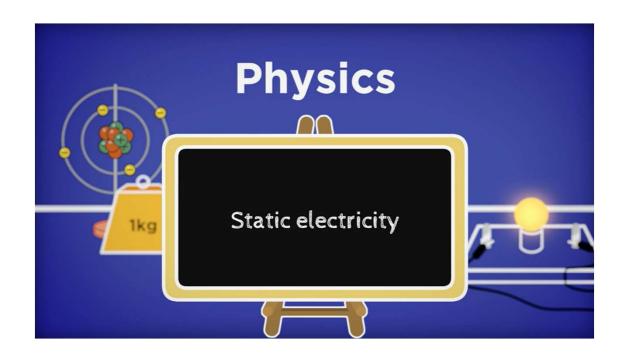

Charges that are <u>different</u> attract (move towards) each other.

Activity: Watch the video and note down three facts

Be prepared to share!

Static Electricity

Plenary:

Today I learnt

•••••

Success Criteria

- ☐ I can state the two types of charge
- ☐I can describe what happens when two charges are next to each oth

Tick me at the end if **you can**

...

Van de Graaff

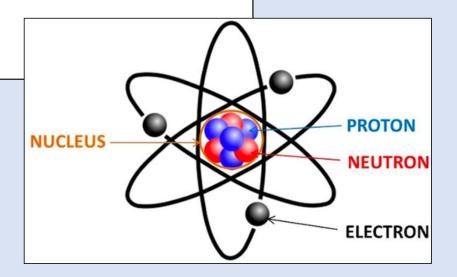

24/09/2024

Starter:

- 1. State the two types of charge.
- 2. Describe what happens when two charges are next to each other.

Page 5

Van de Graaff

24/09/2024

Page 5

Learning Intentions:

• I am learning about static electricity

Page 5

Success Criteria

☐ I can explain static electricity in terms of charge

A Van de Graaff generator produces Static electricity , which

makes your hair stand on end. Static electricity is caused when

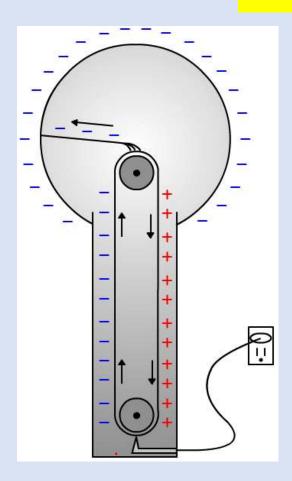

electrons are transferred from one insulator to another by friction.

This causes an uneven number of protons and electrons in a material.

https://www.youtube.com/watch?v=rNEY
3Yv9kC8&ab channel=SpanglerScienceTV

Uses the fact that like charges repel.

A pulley drives an insulating belt given a **negative charge** by a power supply.

The **negative charge** to spread to the dome.

The voltages generated are enough to make your hair stand on end!

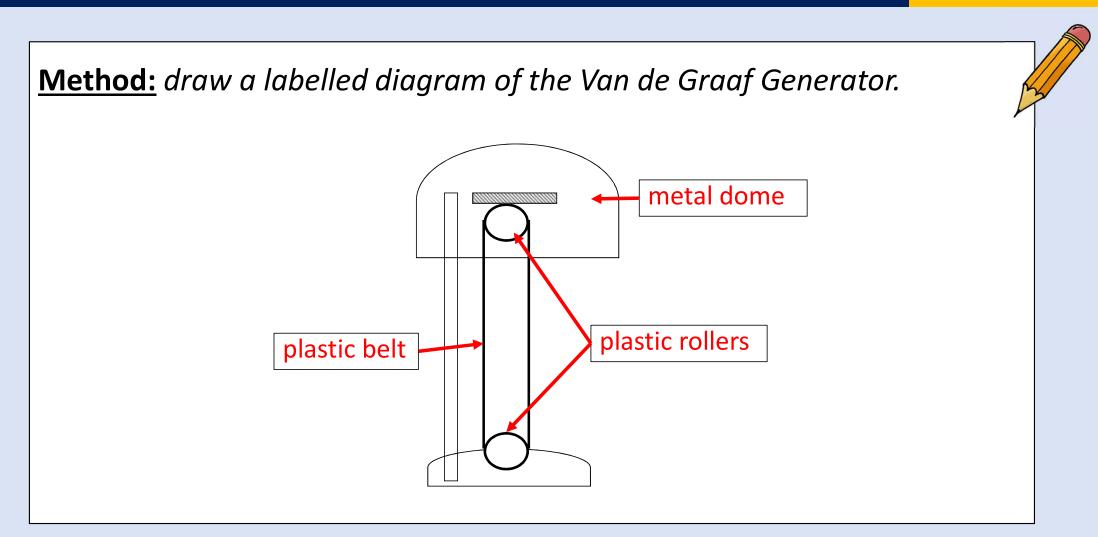

Like charges on individual hairs makes them **repel** each other and stand away from your head.

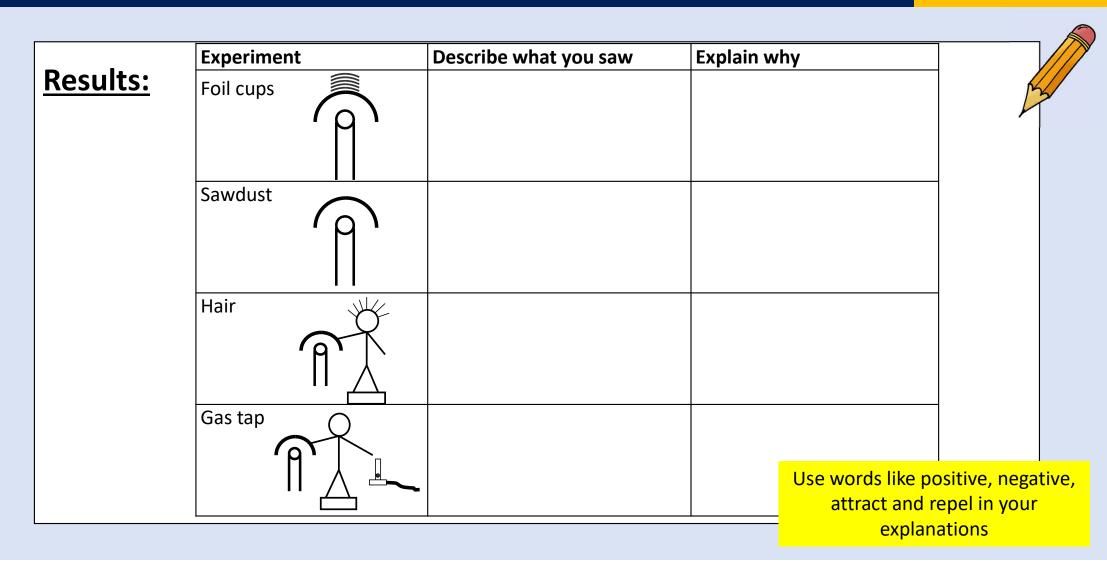

By standing on a wooden or plastic stool you are isolated from ground so that the **charge** will build up on you.

<u>Aim</u>: To investigate the effects of a Van de Graaff generator on different

objects

Conclusion:

When two different materials are rubbed together they become electrically charged.

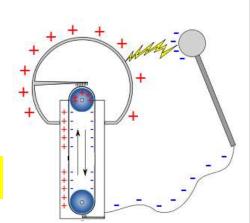

Electrically charged objects can <u>attract</u> small objects.

A <u>positively</u> charged object and a <u>negatively</u> charged object will attract.

Two positively charged objects will <u>repel</u>

Two negatively charged objects will repel

Word bank: attract, repel, rubbed, positively, repel, negatively

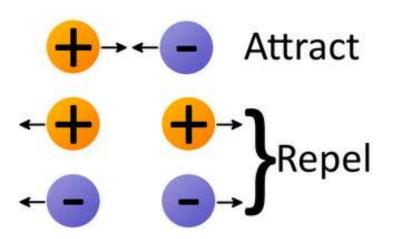

24/09/2024

Van de Graaff Generator

Plenary:

Explain static electricity in terms of charge!

Success Criteria

☐ I can explain static electricity in terms of charge

24/09/2024

Electrical Circuits

Starter:

When you flip a light switch on, the room instantly lights up. How do you think the switch tells the light bulb to turn on? Write or draw your answer below:

Page 7

Electrical Circuits

24/09/2024

Page 7

Learning Intentions:

I am learning about drawing electrical circuits.

Page 7

Success Criteria

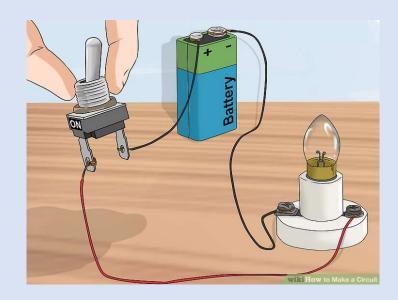

- ☐ I can identify the symbols for components in an electrical circuit.
- ☐I can draw simple electrical circuits.

Electrical Circuits

Items that are connected into an electrical circuit are called **components**.

- Why do you think it is called a "circuit"?
- 2. What has to happen to make the circuit work?
- 3. How easy is it to draw the components?

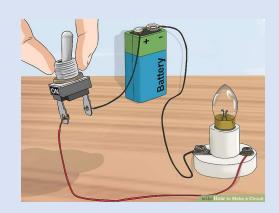

Electrical Circuits

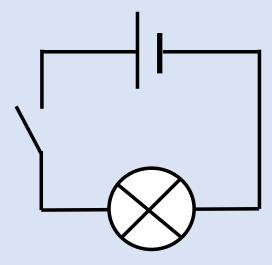

Pictures are:

- difficult to draw
- not always easy to understand

Symbols are:

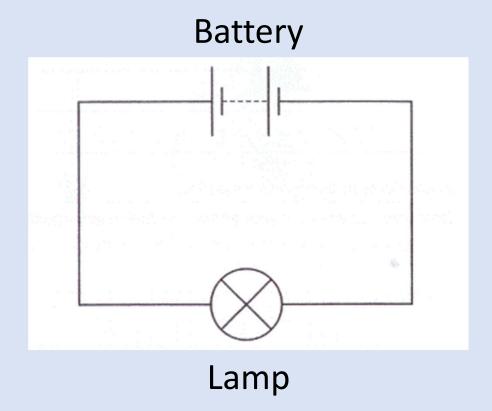

- easy to draw
- easy to understand

Circuit Diagrams

• When we draw circuits, we draw them like so:

Circuit Diagrams

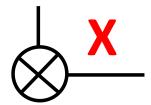

When you are drawing a circuit diagram, there are some basic rules to follow:

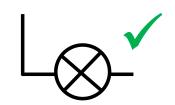

Connecting wires are drawn with a **ruler**

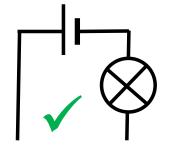

Components don't turn corners, wires do.

The battery is usually on the top line of the diagram, on its own.

Electrical Symbols

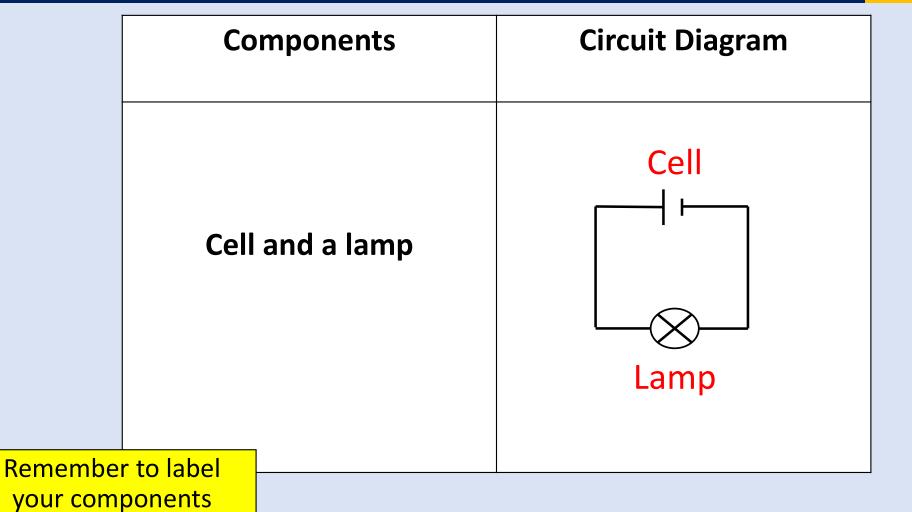

Page 8

Draw the correct symbol for each of the components.

Component Name	Picture	Symbol
Cell	+ DURACELL®	———
Battery (of cells)	+ DURACELL® + DURACELL®	
Connecting wire		
Lamp		——————————————————————————————————————
Switch	No.	
Resistor		
Ammeter		—(A)—
Voltmeter		

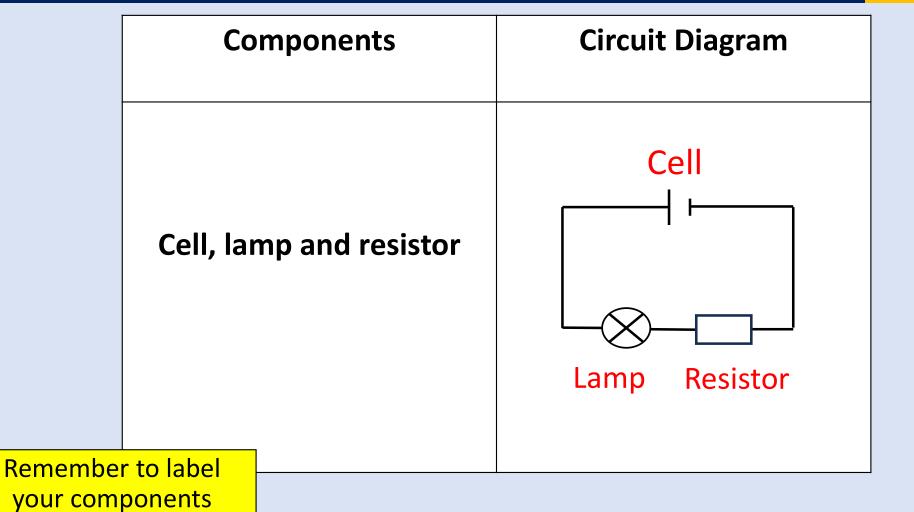

Circuit Diagrams

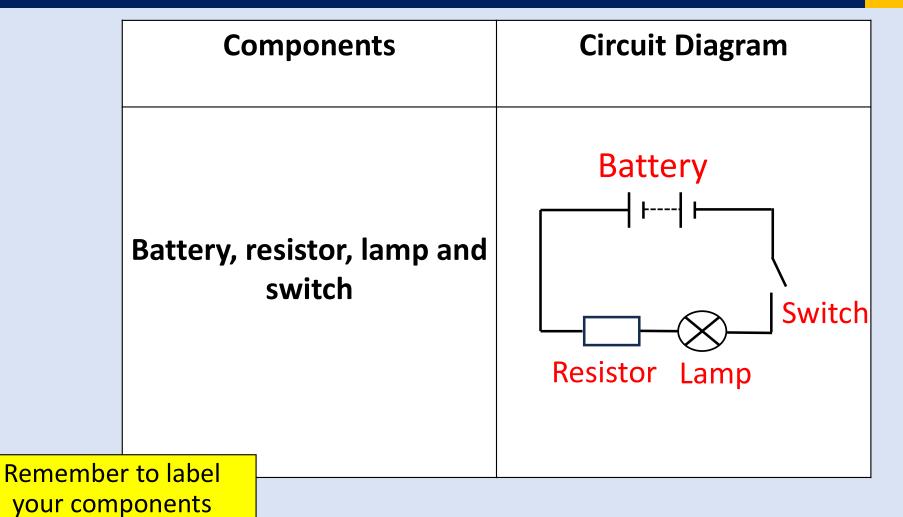

Circuit Diagrams

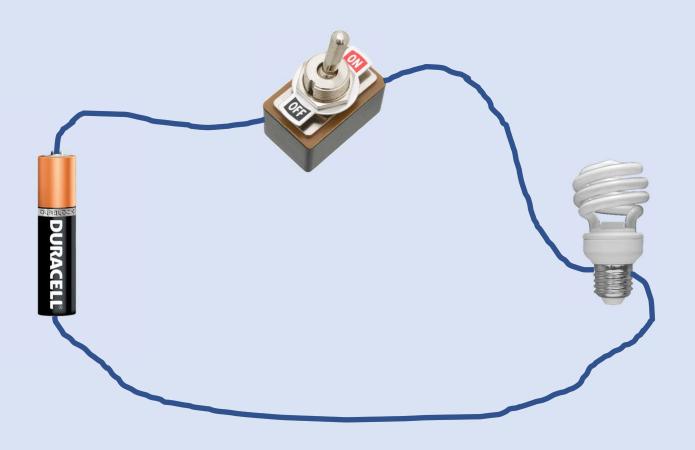

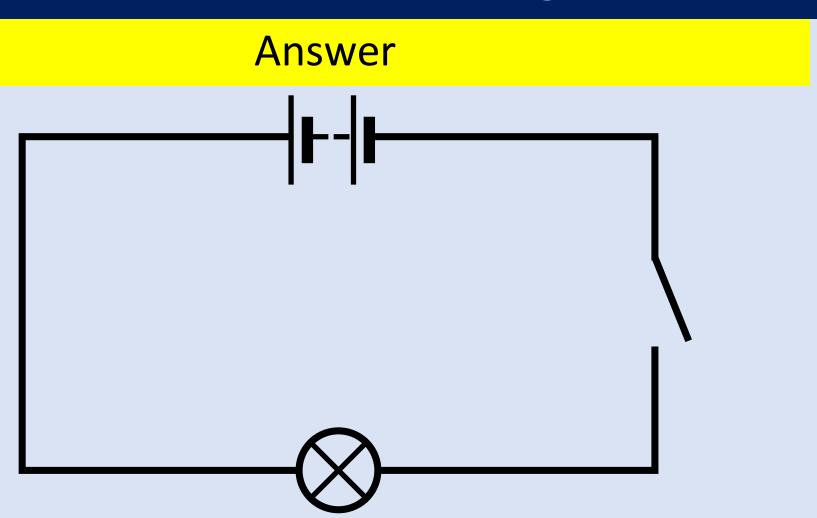

Circuit Diagrams

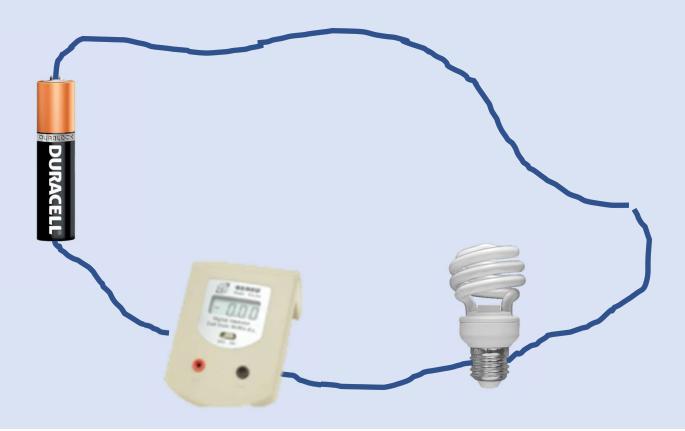

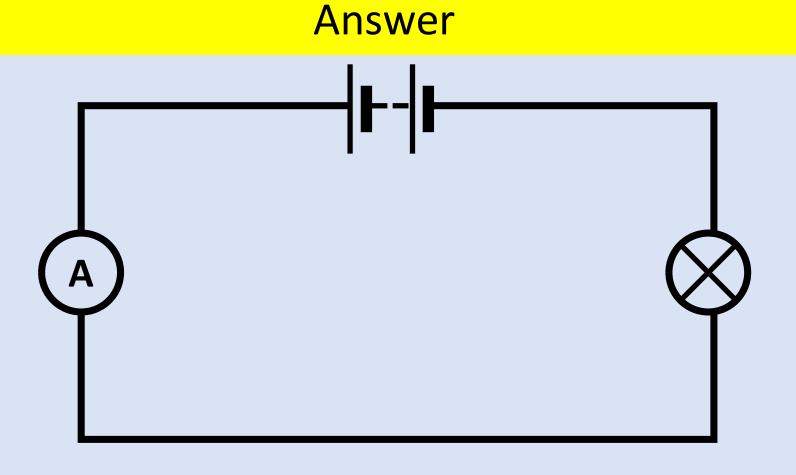

On your show me boards, draw this circuit

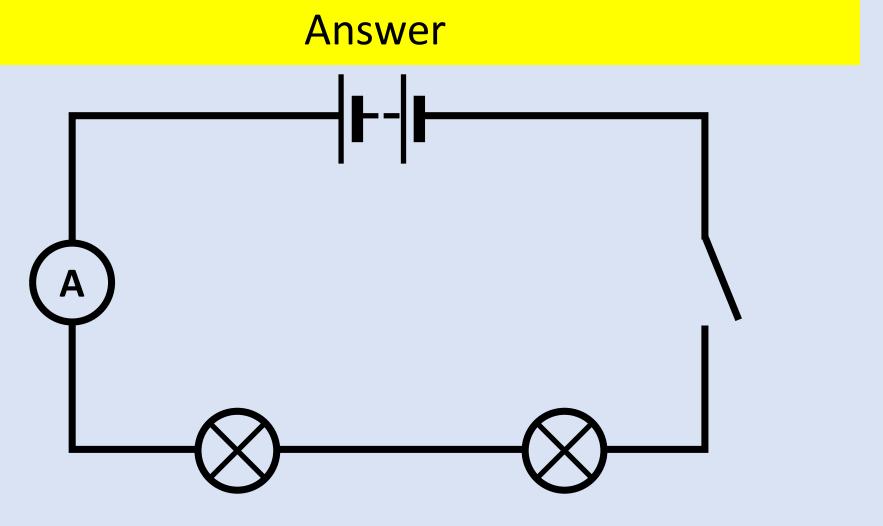

On your show me boards, draw this circuit

On your show me boards, draw this circuit

Design a circuit for your partner

- Describe a circuit to your partner and get them to draw what you describe on a Show Me Board.
- You are not allowed to start drawing until the person has finished describing the circuit.

The Story of Electricity

Activity: Watch the video and note down three facts Shock and Awe - Spark

Be prepared to share!

Shock and Awe: The Story of Electricity- Spark (1 of 3) - video Dailymotion

24/09/2024

Electrical Circuits

Plenary: Match the components to the circuit symbol

Switch

Ammeter

Battery

Lamp

Success Criteria

- ☐ I can identify the symbols for components in an electrical circuit.
- ☐ I can draw simple electrical circuits.

Series Circuits

24/09/2024

Starter:

1. What symbol do we use to represent a bulb?

2. What symbol do we use to represent a battery?

3. What symbol do we use to represent a switch?

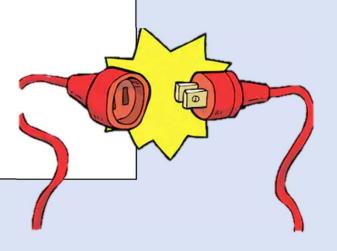

4. When we draw wires, what do we need to use?

A ruler!

Series Circuits

24/09/2024

Page 10

Learning Intentions:

• I am learning about series circuits.

Page 10

Success Criteria

- ☐ I can describe what a series circuit is.
- ☐I can build a series circuit.

Draw and build each of these series circuits and answer the questions

Components	Circuit Diagram
2 Cells and 1 lamp	2 Cells Samp

Draw and build each of these series circuits and answer the questions

Components	Circuit Diagram
2 Cells and 2 lamps	2 Cells

Draw and build each of these series circuits and answer the questions

Components	Circuit Diagram
2 Cells and 3 lamps	2 Cells

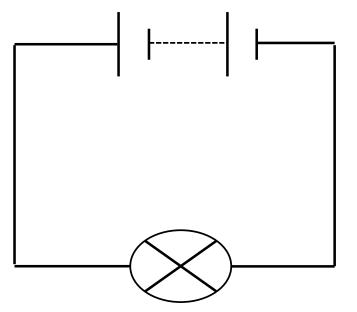

1. What happens when you add more lamps to your circuit?

- 2. Try to explain your answer to question 1.
- 3. (a) What happens when you unscrew one of the bulbs?
 - (b) Does it matter which bulb you unscrew?
- 4. Try to explain your answer to question 3.

This circuit has only ONE loop.

This is called a <u>series</u> circuit.

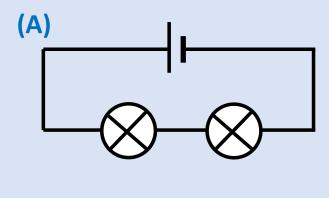

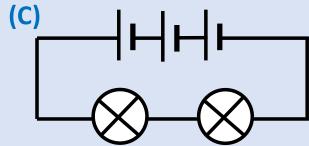

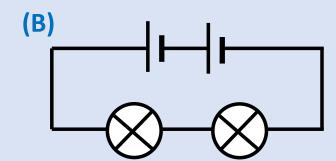

Cells (extension)

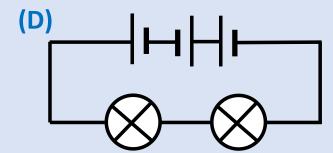

Draw each circuit, then build and answer the questions.

Cells (extension)

Draw each circuit, then build and answer the questions.

1. What happens to the lamps when you add more cells?

2. What happens when you turn one cell around?

3. Try to **explain** your answers to questions 1 and 2.

Plenary:

What do you know now about series circuits, that you did not know at the start of the lesson?

Success Criteria

- ☐ I can describe what a series circuit is.
- ☐ I can build a series circuit.

Tick me at the end if **you can**

Parallel Circuits

24/09/2024

Page 13

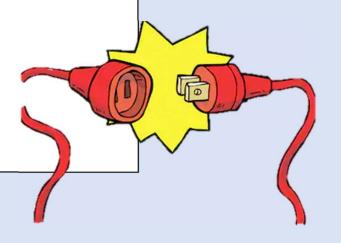

Starter:

1. What happened to the brightness of the lamps when we added more cells to the series circuit?

2. Why?

3. What do we mean by a 'series circuit'?

Parallel Circuits

24/09/2024

Page 13

Learning Intentions:

I am learning about parallel circuits.

Page 13

Success Criteria

- ☐ I can describe the difference between a parallel and a series circuit.
- ☐I can build a parallel circuit.

Lamps in a Parallel Circuit

Draw and build each of these parallel circuits and answer the questions

Components	Circuit Diagram
2 Cells and 2 lamps	2 Cells

Lamps in a Parallel Circuit

Draw and build each of these Parallel circuits and answer the questions

Components	Circuit Diagram
2 Cells and 3 lamps	2 Cells
	3 Lamps

Lamps in Parallel Circuits

Draw each circuit, then build and answer the questions.

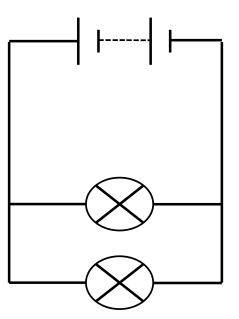

- 1. What happens when you add more lamps to this circuit?
- 2. (a) What happens when you unscrew one of the bulbs?
 - (b) Does it matter which bulb you unscrew?
- 3. Try to explain your answer to question 2.

Lamps in a Parallel Circuit

This circuit has more than one loop.

This is called a **parallel** circuit.

24/09/2024

Parallel Circuits

Success Criteria

- ☐ I can describe the difference between a parallel and a series circuit.
- ☐I can build a parallel circuit.

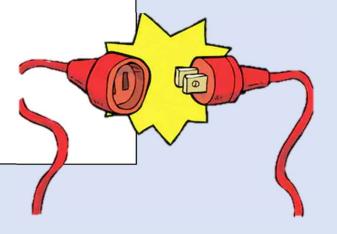

24/09/2024

Starter:

1. What happened when we unscrewed one of the bulbs in the parallel circuit? Explain why.

Page 15

2. Describe the difference between series and parallel circuits.

24/09/2024

Page 15

Learning Intentions:

• I am learning about switches in circuits.

Page 15

Success Criteria

- ☐ I can understand switches in circuits.
- ☐I can use circuit diagrams to build switches in circuits.

Draw and build each of these circuits and answer the questions

Components	Circuit Diagram
2 Cells, 1 lamp, 1 switch in series	2 Cells 1 switch 1 Lamp

Draw and build each of these circuits and answer the questions

Components	Circuit Diagram
2 Cells, 1 lamp, 2 switches in series	2 Cells ——————————————————————————————————

Draw and build each of these circuits and answer the questions

Components	Circuit Diagram
2 Cells, 1 lamp, 2 switches in parallel	2 Cells HH Solve of the second of the seco

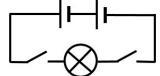

Switches in Circuits

Draw each circuit, then build and answer the questions.

- 1. What do you have to do to light the bulb in each circuit?
- 2. Try to explain your answer to question 1.

- 4. Give an example of a situation where you would want to use:
 - (a) two switches in series to make a device work?
 - (b) two switches in parallel to make a device work?

The Doorbell Circuit Challenge

Your task is to design a doorbell system for a person with hearing difficulties. There are three challenges below.

With your partner, talk about your challenge, and decide what you are going to do.

Each pair will:

- a) Build the working circuit
- b) Draw a circuit diagram on a sheet of A4 paper, using correct circuit symbols
- c) Describe how the circuit works (what does each component do).

The Doorbell Circuit Challenge

Page 17

CHALLENGE 1

When in their living room, the person must know if the front doorbell has been pressed.

CHALLENGE 2

The house has a doorbell at the front door and the back door.

Redesign your circuit to let the person know whether the front or back doorbell is rung.

Draw the circuit diagram after your teacher checks your circuit.

Does your circuit tell you what doorbell – front or back – was rung?

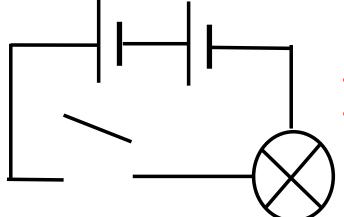

CHALLENGE 3

Extend the system so that it could work in two different rooms.

Your will have to report back to the rest of the class what you have done, and how your design works.

Switches in Circuits

Plenary: What is wrong with this diagram and why?

- Switch drawn incorrectly
- Lamp is placed in the corner

Describe to your neighbour what a switch does in a circuit

Success Criteria

- ☐ I can understand switches in circuits.
- ☐ I can use circuit diagrams to build circuits that use switches.

Tick me at the end if **you can** ...

Measuring Voltage and Current

24/09/2024

Page 18

Starter:

1. When two switches are in a series circuit, how do we make the lamp work?

2. When two switches are in parallel, how do we make the lamp work?

Measuring Voltage and Current

24/09/2024

Page 18

Learning Intentions:

I am learning about voltage and current

Measuring Voltage and Current

24/09/2024

Page 18

Success Criteria

- ☐ I can define voltage and current
- ☐ I can state how current and voltage are measured

Measuring Current

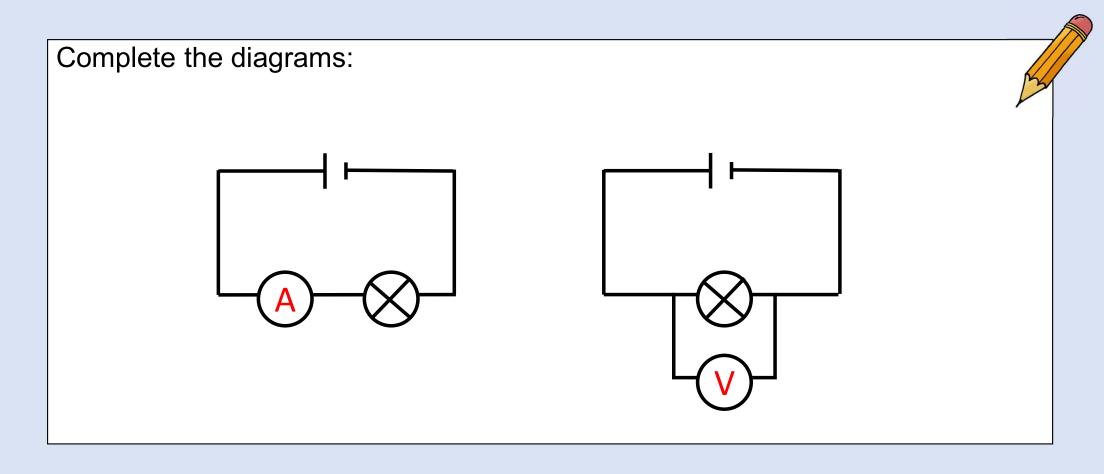

Electric <u>current</u> is the rate of flow of electrons.

Current is measured using an <u>ammeter</u>.

Voltage is the electric push from a battery. It is the energy given to the charges in the circuit.

Voltage is measured using a voltmeter.

Measuring Current

Page 19

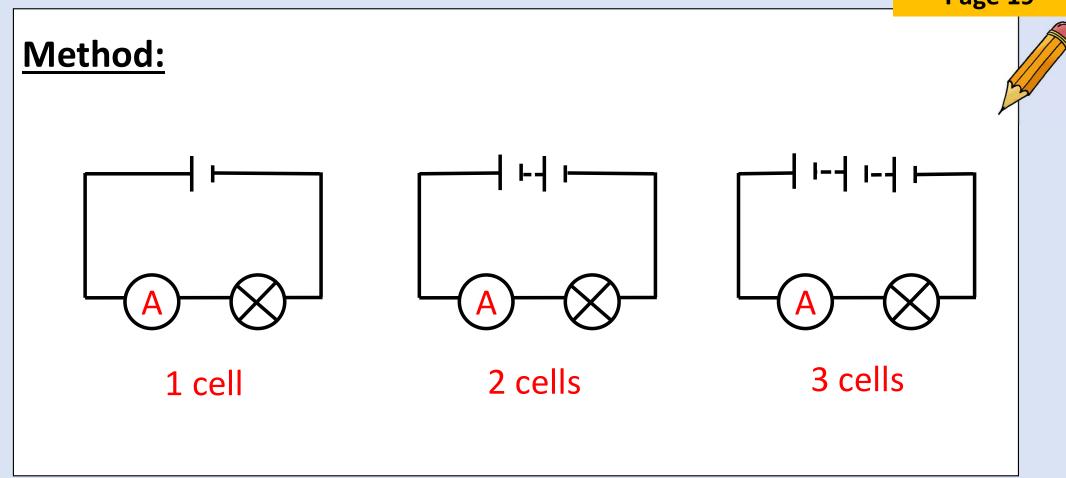

<u>Aim</u>: To investigate the effects of changing the number of cells on current in a series circuit.

Method:

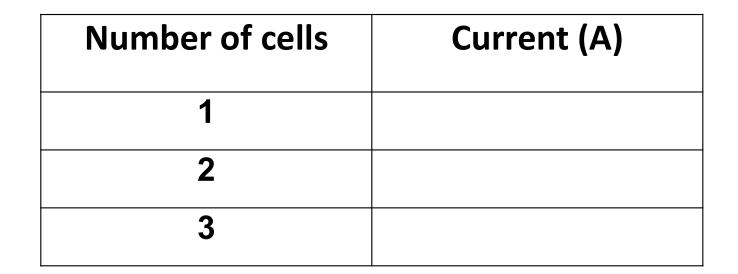

- 1. Build a simple series circuit containing 1 cell, lamp and ammeter
- 2. Measure the current
- 3. Add a 2nd cell, measure the current. Repeat for 3 cells.

Page 19

Page 19

Results:

Page 19

Conclusion: What is the answer to your aim?

Evaluation: How could you improve your experiment?

Page 20

<u>Aim</u>: To investigate the effects of changing the number of cells on voltage.

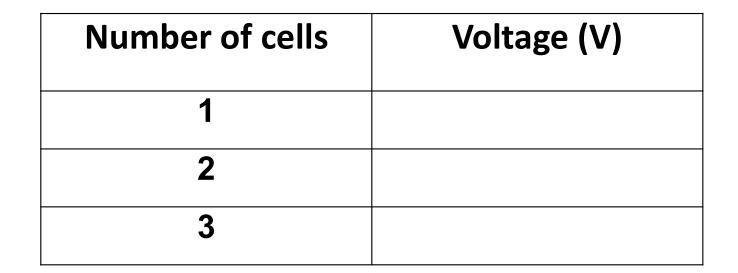

Method:

- 1. Build a simple circuit containing 1 cell, lamp and voltmeter
- 2. Measure the voltage
- 3. Add a 2nd cell, measure the voltage. Repeat for 3 cells.

Page 20 **Method:** 3 cells 1 cell 2 cells

Page 20

Results:

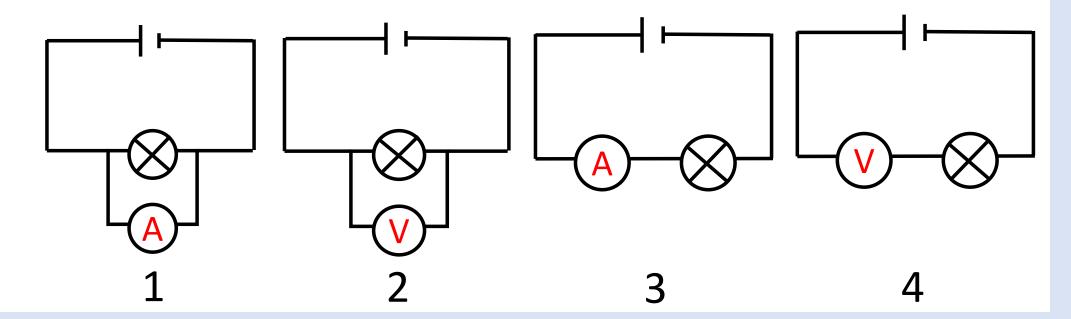

Page 20

Conclusion: What is the answer to your aim?

Evaluation: How could you improve your experiment?

Plenary: Which of these circuits can you use to measure the voltage of the lamp and why?

Success Criteria

- ☐ I can define voltage and current
- ☐ I can state how current and voltage are measured

Chemical Cells

24/09/2024

Starter:

Describe what happens to the output voltage as we increase the number of cells in a circuit.

Page 21

Chemical Cells

24/09/2024

Page 21

Learning Intentions:

I am learning about chemical cells

Page 21

Success Criteria

- ☐ I can build a chemical cell
- □ I can investigate the effect of changing metals on output voltage.

What are Chemical Cells?

- Chemical cells use chemical reactions to transfer energy by electricity.
- Chemical cells include the familiar batteries used in torches and mobile phones.
- There are different designs of chemical cells, with different reactions depending on the type of cell.

Chemical cells produce a voltage until one of the reactants is used up.
When this happens, we say the battery 'goes flat'.

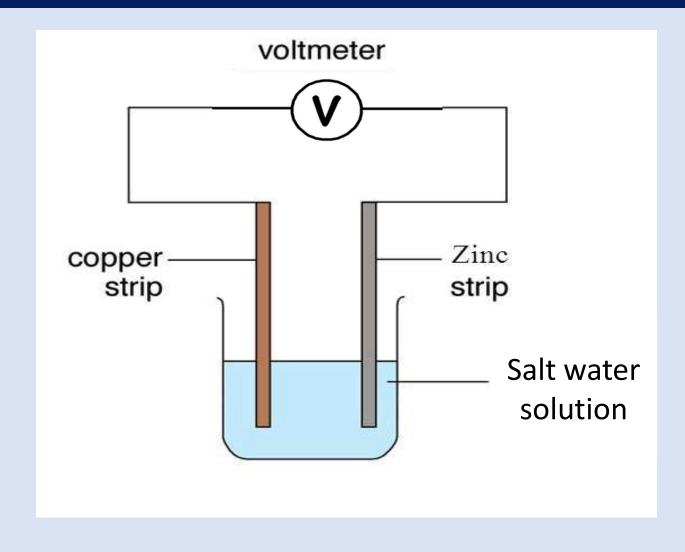

Chemical Cells

A cell/battery contains chemicals which give <u>energy</u>. When you use a battery the <u>chemical</u> energy changes into <u>electrical</u> energy.

A simple chemical cell is made using 2 different <u>metals</u> (electrodes) and an <u>electrolyte</u> (a solution which contains charge particles which is used to complete the circuit).

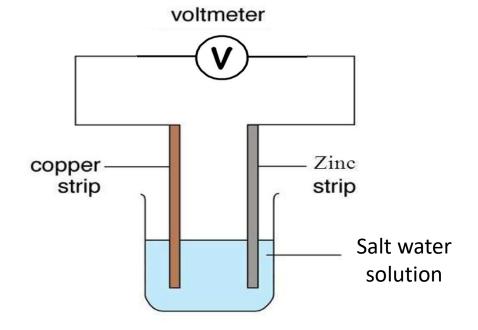

Chemical Cells

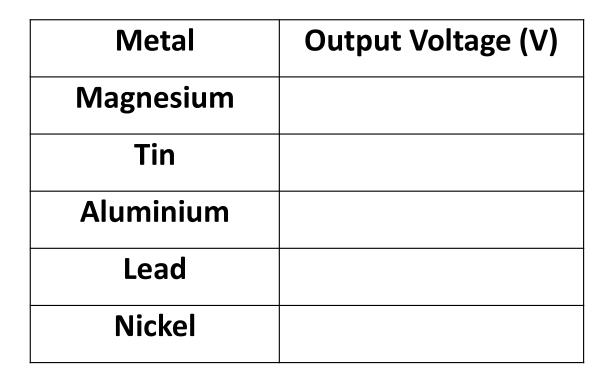

Aim: To investigate which metal electrodes produce the largest output voltage

Method:

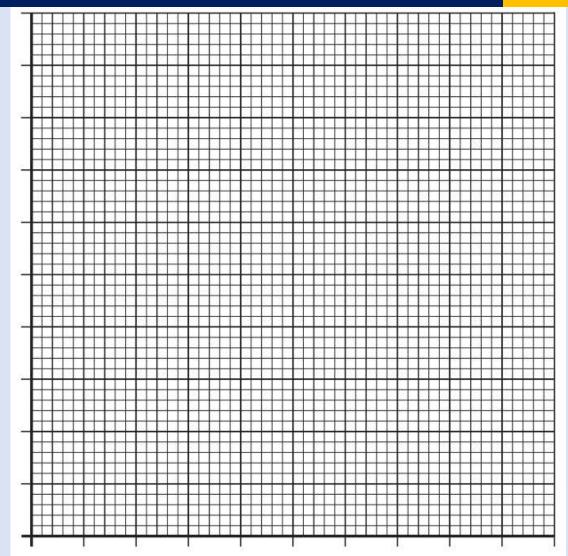

Results:

Results:

Draw a bar graph of your data

Page 23

Conclusion: What is the answer to your aim?

Evaluation: How could you improve your experiment?

Tick me at the end if **you can** ...

24/09/2024

Page 24

Starter:

1. In chemical cells, which type of energy is chemical energy converted into?

2.Describe what a chemical cell is made up of.

24/09/2024

Page 24

Learning Intentions:

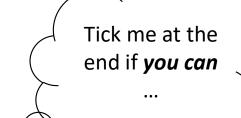

• I am learning how to investigate fruit batteries

Page 24

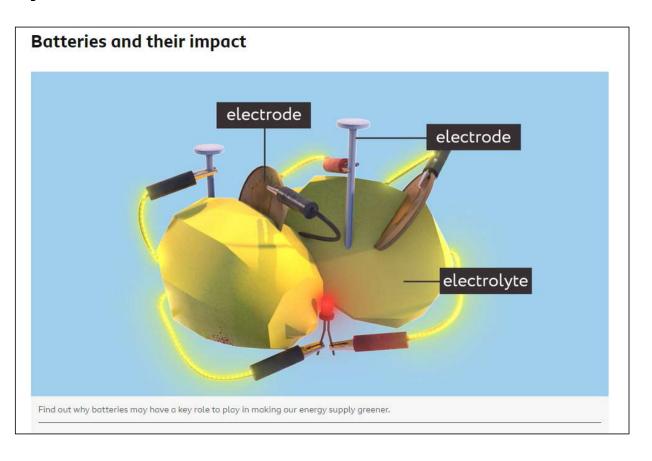

Success Criteria

- ☐ I can describe how to make a fruit battery
- □ I can complete an experiment to investigate the best fruit for making

batteries

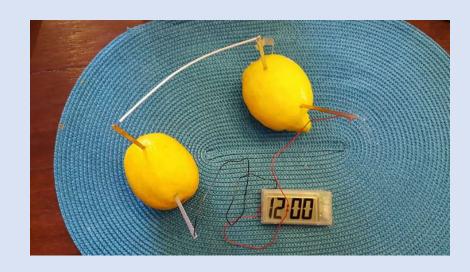

Activity: Watch the video and note down three facts

Be prepared to share!

https://www.bbc.co.uk/bitesiz
e/articles/zx4shcw#zrk3bqt

- You could make your own lemon battery.
- Put a copper penny into the lemon, this will form the **positive electrode**, and a zinc nail for the **negative electrode**.
- These can then be attached to a light bulb or buzzer using alligator clips and wires.
- This experiment can be used to explain how a battery works. A battery requires three things – two electrodes and an electrolyte.

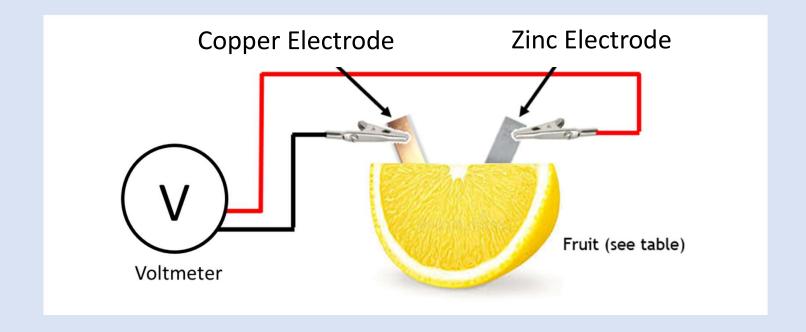

In a fruit battery, the fruit juice is the electrolyte (a liquid that conducts). This allows the electric current or charged particles called electrons flow through it to complete the circuit.

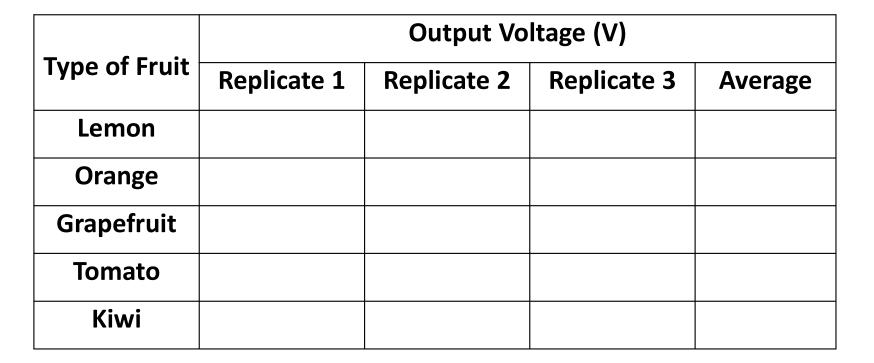

Aim: To investigate which fruit cell gives the largest output voltage

Method:

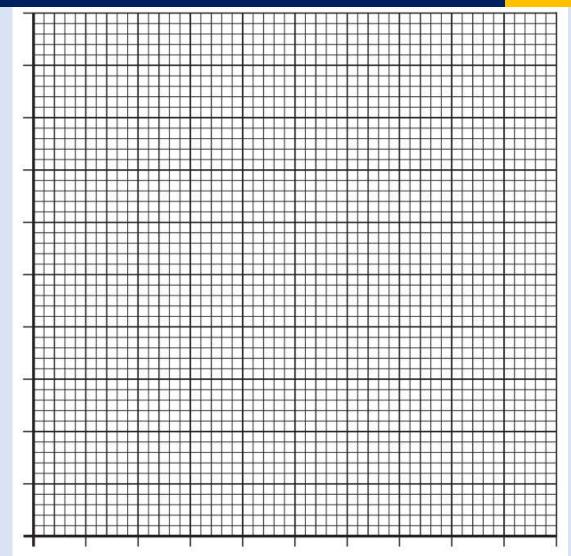

Results:

Results:

Draw a bar graph of your data

Page 25

Conclusion: What is the answer to your aim?
