

Our School Improvement Plan 2023/2024

Improving the use of Digital Technologies specifically using digital tools to enrich and support teaching and learning.

All learners will benefit from improved feedback that is based on accurate assessment data that includes clear strengths and next steps.

Develop our systems in school to support wellbeing, achievement and inclusion.

All learners will experience learning that is supported through an entitlement to digital technology that meets a standard based on a shared understanding expectations in lessons.

Staff to engage in a lesson study model of enquiry to investigate how their teaching approaches positively impact learners in their class.

All children's needs are identified early through reliable and valid assessments, building on the work of QI Writing and Malt Assessments in maths, last session.

Across the school learners will show evidence of raised attainment in writing because of the removal of barriers by digital technology.

All staff in P1 to P3 have a shared understanding of how they can observe and assess play effectively.

Almost all learners can identify their next steps because of robust ongoing assessment and feedback.

All children requiring additional support have high quality individualised and meaningful summaries of support. These are reviewed at regular opportunities.
