

15<sup>th</sup> September 2023

### Numeracy

We have been practising place value- writing and ordering 7, 8 and 9 digit numbers. We also tested ourselves on Times Tables so that we know which ones we need to work on individually this year.

### Topic

We have continued our learning about conservationist John Muir, creating fact files and collaborative art murals to represent his life at different stages. We also discussed what makes a great logo because we want to design one for our Guardians of the Garden committee. We each designed one and we will have a pupil vote once the other class in the committee have designed theirs.

### ICT

We were learning to make a cardboard model of our design idea which will later be transformed into a wood work model. We had to follow our design idea, think about our dimensions, make our models sturdy and explore different ways to construct our model. We also learned about the design process and we have started to find solutions to our design problems.

This week in Internet Safety we were looking at different scenarios and working in groups to think about how we would respond to different situations online. We also learned about what a digital footprint is and we recorded our own digital footprints and learned how the information we share today online can be traced in the future.

### Home Learning

- See grid. We are still waiting on new jotters being delivered to the school.
- Place Value maths worksheet
- Share and discuss your design ideas for your woodwork project with someone at home.
