

Weekly learning 17.11.23

This week in P4/5/6 we have been learning about seasons and how space controls the seasons. We have seasons because of the way the sun shines on the northern and southern hemispheres. If there is lots of light shining on the northern hemisphere it is summer, and winter in the southern hemisphere. If it is in the middle it is either spring or autumn.

We have been learning how to multiply by 10 and 100, dividing using the bus stop method and some of us have been dividing past the decimal point.

We have been writing about Apollo 11. We started by doing research and making notes, then we used the notes to write a recount in the first person. We had to pretend we were one of the astronauts on the mission and describe what it was like and how we felt.

We have been doing astronaut training in PE. We have been working on speed, stamina, agility and balance. We were tracking our progress with stop watches.
