Exam style trig equations - Answers (worksheet)

$$\begin{aligned} \text{1a) } D &= 3 + 1.75 \times \sin(30 \times 5) \\ &= 3 + 1.75 \times \sin(150) \\ &= 3.875 \\ &\approx 3.9 \text{ m} \end{aligned}$$

$$\text{b) } -1 < \sin x^\circ < 1$$

$$\text{At } \sin x^\circ = -1:$$

$$\begin{aligned} D &= 3 + 1.75 \times -1 \\ &= 3 - 1.75 \\ &= 1.25 \text{ m} \end{aligned}$$

$$\text{At } \sin x^\circ = 1:$$

$$\begin{aligned} D &= 3 + 1.75 \times 1 \\ &= 4.75 \text{ m} \end{aligned}$$

The depth of the water is between 1.25m and 4.75m so the maximum difference is 3.5m

$$\begin{aligned} \text{2a) } H &= 10 + 5 \sin 10 \\ &= 10.9 \text{ m} \end{aligned}$$

$$\text{b) At } H = 12.5 \text{ m:}$$

$$12.5 = 10 + 5 \sin t'$$

$$5 \sin t' = 12.5 - 10 = 2.5$$

$$\sin t' = 0.5$$

$$t' = \sin^{-1}(0.5) = 30^\circ, 180 - 30 = 150^\circ$$

The wheel is at 12.5m at 30s and 150s.

Exam style trig equations - Answers

$$3a) h = 8 + 4 \sin 30$$

$$= 10m$$

$$b) 10.5 = 8 + 4 \sin t^\circ$$

$$\sin t^\circ = 0.625$$

$$t^\circ = \sin^{-1}(0.625) = 39^\circ, 180 - 39 = 141^\circ$$

Point A is at 10.5m at 39s and 141s.

$$4. 458 = 320 \sin x^\circ + 150$$

$$\sin x^\circ = 0.9625$$

$$x^\circ = \sin^{-1}(0.9625) = 74^\circ$$

The angle is 74° since $0 \leq x \leq 90$.

$$0 \leq x \leq 90$$

$$5a) h = 15 \tan(25^\circ) + 1.7$$

$$= 7.3m$$

$$b) 18.4 = 15 \tan x^\circ + 1.7$$

$$\tan x^\circ = 1.113$$

$$x^\circ = \tan^{-1}(1.13) = 48^\circ$$

The angle of elevation is 48° when the lift is 18.4m above the ground.

$$0 \leq x \leq 90$$
