

# Shape Rocket

Can you create a rocket for Armstrong to get to the moon using any junk you have? You could use empty cereal boxes, empty bottles, paper or card. You could colour your rocket in using any colouring pens/pencils or paint.

Once you have created it, can you describe it to someone making sure to tell them what junk you have used and how the rocket is going to fly into space?

My rocket has lots of shapes.  
I recycled some junk to make it.  
I used a cereal box for the body and cut a hole in it for Armstrong to see out of.  
I used red and orange pieces of paper for the fire.  
I used a pizza box for the top and coloured it in blue, the same as the sky.
