

N5 Computing Homework

Name: _____

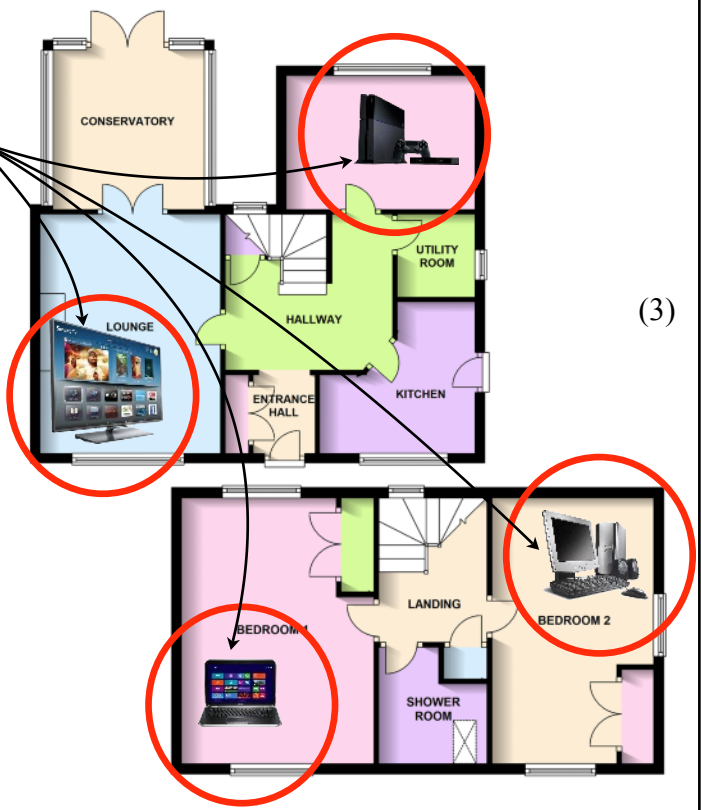

Grade: _____
/ 12

Technical Implementation (Networking/Connectivity)

Answer the questions below in the spaces provided.

1. Stephen has four devices in his house that he wishes to link together in a network: A desktop PC, a tablet, a games console and a Smart TV.

Stating the devices and cables he would need, describe how Stephen would network these four devices.

2. Stephen is also looking to use some wireless technology with his LAN.

State **one** advantage and **one** disadvantage of using wireless technology.

Advantage: _____

Disadvantage: _____

3. Stephen learns that his school uses a *client/server network* of computers.

a) Describe **one** role of the school server in this network.

(2)

(1)

- 3 b) State **one** reason why the school would use a client/server network, rather than a peer-to-peer network. (1)

4. “Networks of computers and servers all linked throughout the world. Two examples of its use are chatrooms and search engines”.

What is this a description of? (1)

5. Two common types of cable used in networks are Coaxial and Fibre Optic. Explain why, over larger distances, Fibre Optic cable would be a more suitable for use in a network. (2)

6. When Jessica logs on to the server at school she is asked to renew her out-of-date password. The server requests that she enters the new password twice. a) Why does the server not just ask for her password once? (1)

- b) Explain why, when Jessica enters her password, the characters appear as * or •. (1)
