

Card 1 - Sharks

Sharks can be found in every ocean, and some types of sharks can even be found in fresh water. Most sharks are meat eaters, and can smell a drop of blood from over 400m away. Lots of people are scared of sharks, but shark attacks are rare. Out of over 500 types of shark, only about 15 types have ever attacked a person.

The most well-known type of shark is the great white shark which can grow to 5m long and move at speeds of up to 15mph. The great white shark gives birth to live babies (pups), although most sharks lay their eggs in a safe place to hatch.

Card 2 - It's here...

Its eyes, gleaming
Its tongue, licking
Its teeth, gnashing
It's here...

Its feet, stomping
Its tail, swishing
Its claws, scratching
It's here...

Its hands, gripping
Its breath, stinking
Its mouth, opening
It's...
