Evening Standard

**Huge queues outside Primark as shops
reopen in England**

How can people be so ignorant?

Shutters have been lifted after almost three months of inactivity, as eager shop owners and staff urge customers to enjoy their first in store spree of the year. Early morning images showed queues of eager shoppers in London, Nottingham, Birmingham, Liverpool and other cities waiting for big name retailers including Primark and Nike Town to open their doors. Primark which is opening all of its 153 doors, has pledged to ensure basket handles are cleaned after use and every second till will be closed to maintain social distancing for customers and employees.

Ameera Mohammed, 43, "I couldn't wait for primark to reopen, the price is so good"

Shoppers were told to use hand sanitiser as they walked into the chains oxford street flagship, which opened its doors at 8:00am. Dispensers have been stationed at the shops entrance, where members of staff are observing customers as they enter. A sign on the window of the store, near Tottenham Court Road, advises shoppers about the steps taken to ensure "the wellbeing of our colleagues and customers".

Here is s3 Eloise and her fantastic work also in English.

English- Lesson 4, 'The Murderer'

Task one

Mobile Phone, Landline, computer, electric alarm clock, camera, TV , X-ray machine, Speakers, smart watch, headphones.

Task two

A positive effect technology has had on communication is that you can be in touch with anybody around the world and stay in contact with them. However, a disadvantage is that people can underappreciate their time with loved ones and take them for granted as they could video call them whenever they want.

A negative impact that technology has had on health is it can be straining on your eyes and the things technology can support (social media) can be mentally damaging to people of all ages. A positive is that you can get in touched with hospitals and first responders in an emergency very quickly and that can save lives.

Lastly a positive that technology has had on education is that you can stay in contact with teachers if there is a pandemic and you can't go into school. A negative is that there is a lot of fake new and information on the web. If you are writing a report or trying to search for facts it can be very distracting, and it can lead to people believing and thinking other people's opinions are facts.

Task three

Technology is damaging younger generations education! Do you want your child to learn the fundamental lesson to set them up for life? People online are undermining, and discrediting lessons teachers are trying to teach YOUR children. People from the general public, possibly without any real knowledge, can create a professional looking website explaining their ideological beliefs and opinions and passing them for facts. This can create a dangerous, unstable, and confusing environment for young children. The fact is twenty-seven million people are registered in Wikipedia and have made articles. The worrying thing is how many of them have any credible knowledge in what they're talking about. The real danger is kids are impressionable and vulnerable which makes it easy for misleading facts to spread and cause offense in the long run.

Task four

I think that technology has helped people live an easier life. From having a watch on your wrist that can tell you how many calories you have burned to a machine that can take a snapshot of a moment in time. Technology is helping us in everyday life, and we don't even always realise it anymore. I think that the incredible things technology has helped us achieve not only in helping us live a leisurely and more accessible lifestyle but medically. We can now take X-rays to look at peoples' bones to see if it's broken. Technology is saving lives. Sure, sometimes people can be less sociable, and we can all get a bit side-tracked, but technology is an essential part in all our lives.

Here is a fantastic sculpture created by S1 Maisie in Art!

Here are some amazing still life drawings by S3 Adam Richie in Art!
