

We have to be careful about the Coronavirus. I might need to get a test.

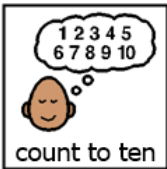

My parent or carer will drive me to a test site. My parent or carer will do the test in our car.

They will use a swab to do the test. The swab looks like a cotton bud.

First they will put the swab into my mouth. It needs to reach my tonsils so I will need to open my mouth wide.

The adult will count to 10 and then take the swab out.

Then they will put the swab up my nose.

The adult will count to ten and then take the swab out. Then the test will be finished.

The test doesn't feel good but it is important that I let the adult do it.

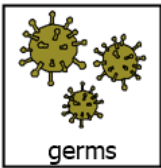

I might get a treat when the test is finished.

We have to stay at home now for a few days until we know it is safe to go out again.

## Having a Coronavirus test at home

We have to be careful about the Coronavirus. I might need to get a test.

My parent or carer will do the test at home.

They will use a swab to do the test. The swab looks like a cotton bud.

First they will put the swab into my mouth. They need to put it quite far in to reach my tonsils.

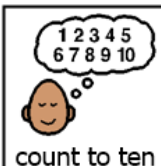

The adult will count to 10 and then take the swab out.

Then they will put the swab up my nose.

The adult will count to 10 and then take the swab out. Then the test will be finished.

The test doesn't feel good but it is important that I let the adult do it.

I might get a treat when it is finished.

We have to wait at home for a few days until we know it is safe to go out.
