

How my body may change

my voice changes

I get stronger

I get longer

as a baby

baby teeth grown in

hair grows

How my body may change

my speech
may
become
clearer

I may start
to learn
how to
move my
body.

I get taller

baby teeth
continue to
grow in

as a toddler

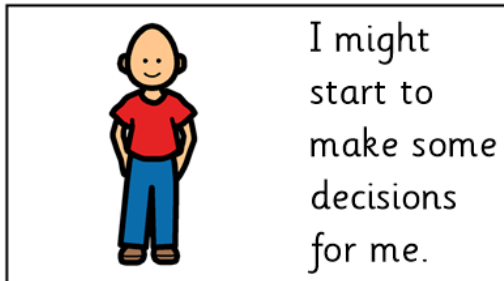

hair
continues
to grow

How my body may change

How my body may change

Hair may start to grow thicker on my legs and arms.

Hair may begin to grow around my penis and testicles.

My testicles may start to get bigger and the scrotum may begin to thin and redden.

My voice may start to get deeper.

Hair may start to grow under my arms.

I may have sudden changes in my moods.

My sweat may start to smell.

I may grow taller and become more muscular.

I may develop spots on my face, neck, back and chest. This is called acne.
