# Sensory Processing

What is sensory processing?

How the brain receives and understands messages from the senses.

## Hyposensitive

I may speak loudly

I may listen to music loudly

I may not realise you have said my name

I might not have a good memory

I might think aloud.

I need to touch things

I need to touch people

I might not realise I am hurt.

I might bring things to my mouth

I might not know I have bumped into people

I might not notice smells

I often try to smell new things

I might prefer spicy foods.

I might prefer sweet foods

I might eat food that has strong flavours.

I might like to chew a lot.

I might experience double vision

I might get tired easily.

Reading and writing might exhaust me.

something else

## Hypersensitive

I may speak quietly

It can feel sore even if someone just bumps me

Smells upset me

I might try to avoid smells

I might prefer dry foods

I don't like to be touched

I don't like touching new things

Clothes can make me very uncomfortable

I might have a good memory

alarms might distress me

It might be difficult for me to sleep

something else

## More information

Sometimes I can be very hyposensitive

Sometimes I can be very hypersensitive

I can't control or choose to be hypo or hypersensitive
