

# Neurodiversity

Neurodiversity is the term used to describe all neurotypes.

## Neurodivergent

A person

whose brain makes connections differently from a neurotypical brain.

who is more likely to be able to think outside the box.

who is more likely to approach situations differently.

who is more likely to bring different perspectives to things.

who is less likely to need to make small talk.

## Neurotypical

A person

whose brain makes connections in a way that require few societal adaptations.

whose brain develops in the typically way expected.

who is more likely to be comfortable speaking to new, unknown people.

who is less likely to feel 'out of friendship groups.

who is more likely to adapt quicker to sudden changes.
