2 Page Pdf

This is a two page pdf hosted on google docs. It is to show a workaround for a issue on Glow Blogs as of September 2025

The issue is that pdfs uploaded to Glow Blogs are 'truncated' to one page.

We hope this is fixed soon. There are a few workarounds you can use in the meantime.

Workaround 1 Media Settings

In your dashboard **Settings -> Media**
set the **Resize larger images to** setting to 0 and save.

This has the **disadvantage** that it will allow you to upload very large images to you blog without resizing. This will take up space on your blog very quickly. We recommend that you change the setting then reset it to 1260 after uploading PDFs.

Resize larger images to

1260 pixels

The maximum size of the longest side of an uploaded image, larger images will be resized to avoid using up all your allocated space for uploaded files.
Set this to 0 (zero) to stop resizing, but note this will probably cause you to use your allocated space for uploaded files up faster.

Save Changes

Workaround 2 Google docs

If you have access to google docs you can upload a pdf there and share it;

Set General access to 'Anyone with the link' and copy the link.

Paste that link into the editor. It will embed the pdf in the post.

you can also just use the url in a link.

Dflip will also work with Google docs.
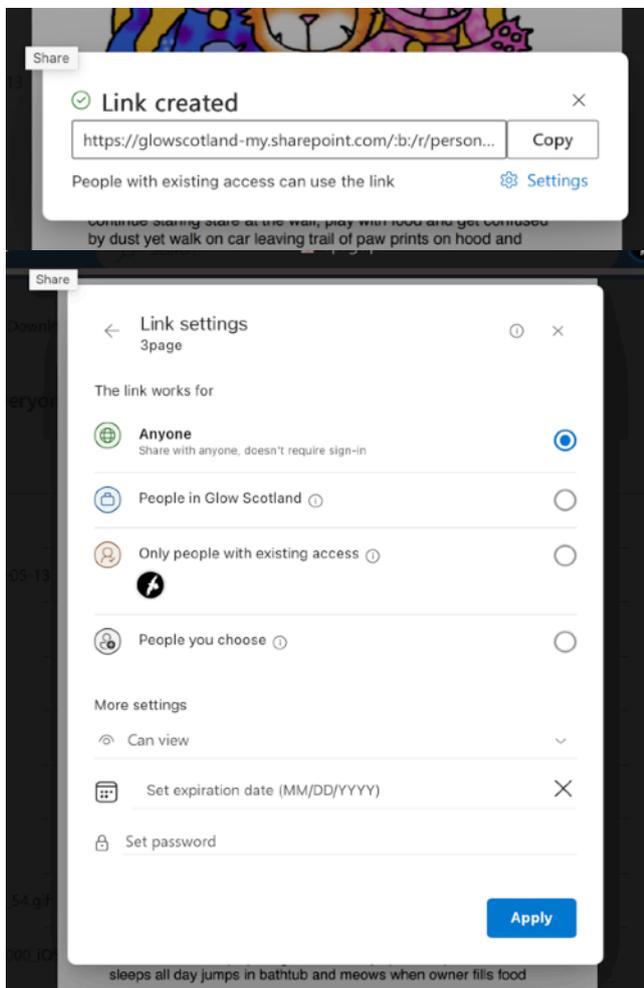

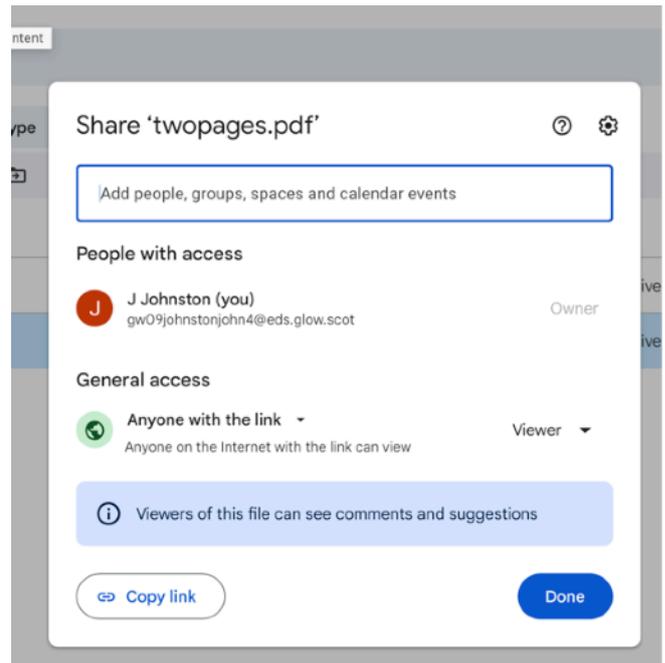

Workaround 3 Onedrive

You can also host pdfs on Onedrive, these files do not embed, so you can only link to them.

Open the PDF in Onedrive, Click the Share icon in the toolbar. Then the setting icon and set the share to with Anyone. Them Apply.

You can use the link in a post or page.
