Grow Your Own Food

All the food we eat travels to us by boat, plane and lorry, using fossil fuels. Growing our own food means this isn't necessary. Using pesticides and growing only one crop in a large space means there isn't much biodiversity. Lots of different foods grown together in a local garden without pesticides encourages biodiversity and healthier food. Growing food is fun and rewarding and an effective way of encouraging children to eat a wider range of food.

Active Travel

Taking Public Transport, walking, cycling or scooting is one of the most climate friendly actions we can take. Darnley has been designed for driving, not walking or cycling, but we can call for this to be changed. Imagine living in a community where active travel is the easy choice and ask our representatives to make it a reality.

Contact your local councillor to demand improved, more frequent public travel and safer, more inclusive active travel options.

theyworkforyou.com

Join St Angela's & Darnley Primary's bike bus every Monday & Friday. Support for setting up bike & walking bus support is available from PFFS:

Bike for Good South:

bikeforgood.org.uk/locations/glasgow-south-community-hub

Reduce & Reuse

Libraries aren't just for books! Even if you can afford to buy everything you want, it is more climate friendly to hire, borrow or share things. Instead of buying a new power washer, hire one for the days you need it. For things it's better to own, buy pre-loved from charity shops. Donating to charity shops is important, but buying from them is equally so.

Kinder Handl: Battlefield, Mount Florida & Newton Mearns

Repair & Recycle

Save broken items from landfill, where they release toxins into the ground and air. Prevent clothes from becoming part of clothes mountains in developing countries. Give new life to your old favourites. Learning new skills to repair items can be fun and satisfying.

Green Energy

A green energy supplier is a company that generates the power it provides for its customers' homes via renewable sources such as: Hydroelectricity, Solar Power and Wind Power.

OVO Energy is a Glasgow based green energy provider who support local community projects.

www.ovoenergy.com

Ecotricity is the UK's largest green supplier, their electricity is 100% green – made from the sun and the wind. They generate about 20% of it themselves and the rest is certified green energy that they buy from other green generators or via the wholesale market.

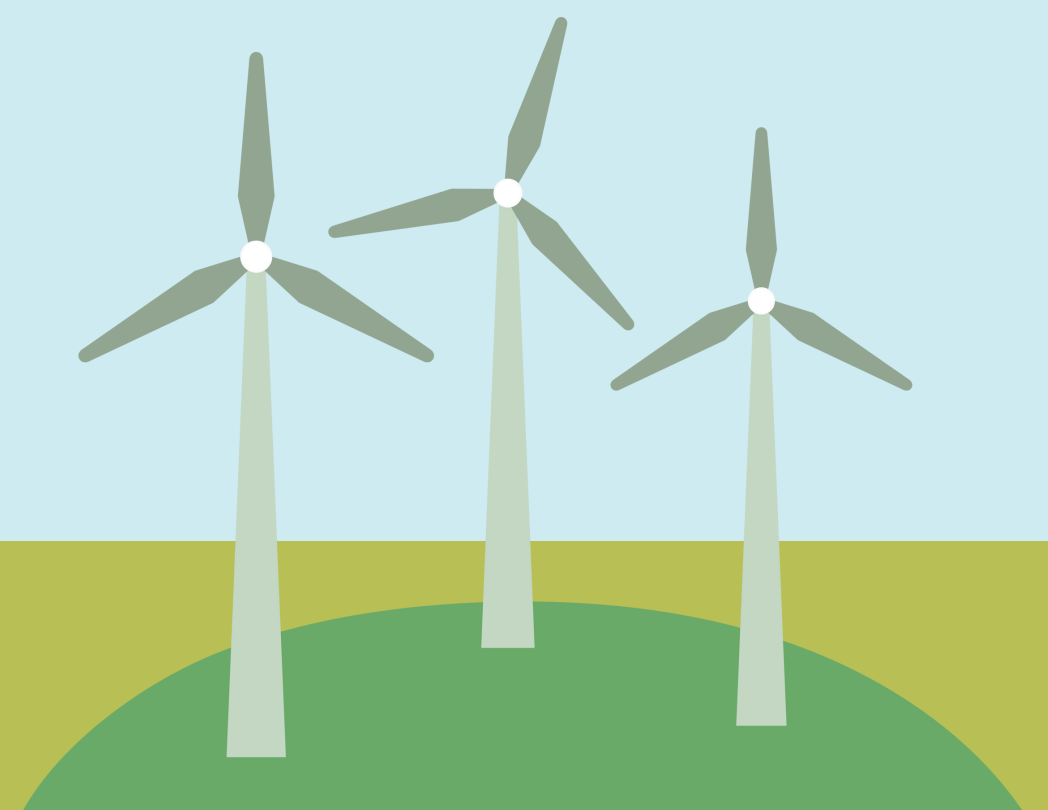

ecotricity.co.uk

Octopus Energy boast that all of their smart tariffs feature 100% renewable electricity and no exit fees. They are starting to lead the charge in the race for renewables and are the only electricity supplier approved by Which?

octopus.energy

You can now ask for renewable energy from the following providers:

British Gas
E.ON
EDF
nPower
