

Stop Motion Animation

You will need:

- a smartphone or a tablet (with camera)
- adult permission to install an app
- materials for your animation: small toys/ paper/ playdough/ LEGO/ household materials

Method:

1. Plan your animation. I drew a quick story board, but I'm sure you'll be more creative.
2. Set your scene. Maybe add some props and a background.
3. Get an adults help to install a stop motion app. I used the free 'Stop Motion Studio' and it was super easy! (maybe watch some of the tutorials in the app before you get started)
4. Set up your camera somewhere secure so that it doesn't move while you are filming.
5. Put your characters in place and move them a TINY bit, then take a photo. Repeat until your movie is finished!
