

Perimeters of Shapes

The perimeter of a shape is the total distance measured around the outside edge of the figure.
 Calculate the perimeter of the figures shown below leaving the answer in the smaller units.
 Diagrams not to scale.

The perimeter of a **rectangle** = length + width + length + width = $l + w + l + w$
 = $2 \times \text{length} + 2 \times \text{width}$ = $2l + 2w$
 = $2(\text{length} + \text{width})$ = $2(l + w)$

Use the formula $P = 2(l + w)$ to find the perimeter of these rectangles.
