

Symmetrical Food

Food is a fun way to explore symmetry! We would normally make symmetrical biscuits in school by covering a digestive biscuit in icing then decorating it with an assortment of 'sprinkles', making sure both sides are the same (including the colours we use). Why not have a go at home if you have the right ingredients! You could try something different like cupcakes or this butterfly cake my girls made for me recently. If you want a healthier choice, why not try arranging some fruit in a symmetrical pattern - you could even make a rainbow!

LI: We are learning about symmetry

LC: Symmetrical Food

SC: I know that a pattern is symmetrical if one side is a mirror image of the other - SA
I can make a piece of food that has a clear line of symmetry.

I can decorate/complete my food item so that it remains symmetrical.

Challenge: I can look for examples of symmetry in real-life foods (e.g. strawberry) - SA.
