

Cutting Items into Halves and Quarters

You create halves when you make two equal parts. You create quarters when you make four equal parts. Try to split the items below into equal parts. Decide which ones can only be made into halves and which ones can be made into halves and quarters. You can use this sheet by drawing on lines to show the parts (with a pencil or put it in a polypocket and use a whiteboard pen), folding each item or cutting each item.
