

Birds in Your Garden

There are many different types of bird that you might see in your garden. Here are a few of them:

Robin

Robins are very easy to spot in your garden. They have a red breast and a brown head and back. They have long legs and a short tail. They live in one area to stop other robins living there. They eat insects, fruit, seeds and worms.

Jackdaw

The jackdaw is a noisy bird. They are quite large and have a grey neck, a short beak and white eyes. They eat insects, dead animals and other birds' eggs. They live in woods, parks and gardens. Jackdaws steal things; not just food but objects too!

Blue tit

The blue tit is a very small bird with bright yellow and blue feathers. They eat insects, seeds and nuts. They eat from bird tables and live in garden nesting boxes.

Blackbird

Blackbirds are very common garden birds but they also live in farmland and woodland. Blackbirds live on their own. The male is black with an orange beak, and he has an orange ring around his eye. The female is dark brown with a brown beak. They nest in trees and like to sing.

Heron

Hérons live near ponds. This is because they eat fish and sometimes steal the fish from people's ponds! They are quite large with a long thin beak. They also have thin legs and necks. They build nests in trees. When they fly, they stretch their legs out behind them.

Questions

Birds in Your Garden

There are many different types of bird that you might see in your garden. Here are a few of them:

Robin

Robins are very easy to spot in your garden. They have a red breast and a brown head and back. They have long legs and a short tail. They are very territorial. This means they live in one area and will stop other robins from living there too. They eat insects, fruit, seeds and worms.

Jackdaw

The jackdaw is a noisy bird. You would definitely notice this bird in your garden. They are quite large, and have a grey neck, a stubby beak and white eyes. They eat insects, dead animals, eggs, young birds and seeds. Jackdaws are known for stealing things; not just food but objects too!

Blue tit

The blue tit is a very small bird with bright blue and yellow feathers. The male and female look the same. They eat insects, caterpillars, seeds and nuts. They often eat from bird tables and live in garden nesting boxes. In winter, they meet with other blue tits to make it easier to search for food.

Blackbird

Blackbirds are very common garden birds. They also live in farmland, woodland and near streets and coasts. They eat insects, worms, seeds and fruit. Blackbirds tend to live on their own. The male is glossy black with an orange beak and an orange ring around his eye. The female is dark brown with a brown beak.

Heron

Hérons like to stand next to garden ponds. This is because they love to eat fish, and sometimes steal very expensive fish from people's ponds! They are quite large and have a long thin beak, long thin legs and skinny neck. When they fly, they stretch their legs out behind them and their neck is folded back.

Questions

1. What does a robin eat? Tick **one**.

- insects, fruit, worms and seeds
- fruit, insects and eggs
- worms, eggs and insects

2. In which season do blue tits work together to find food? Tick **one**

- summer
- spring
- winter

3. Write 2 adjectives from the text that describe a jackdaw.

4. Put ticks in the table to show which sentences are true and which sentences are false.

Sentence	True	False
A male blackbird has a brown beak.		
Heron have long thin legs.		
Blackbirds usually live on their own.		
When herons fly, they stretch their legs out in front of them.		

5. Why do herons like to stand near garden ponds?

Answers

1. What does a robin eat? Tick **one**.

- insects, fruit, worms and seeds**
- fruit, insects and eggs
- worms, eggs and insects

2. In which season do blue tits work together to find food? Tick **one**

- summer
- spring
- winter**

Heron have long thin legs.	✓	
Blackbirds usually live on their own.	✓	
When herons fly, they stretch their legs out in front of them.		✓

5. Why do herons like to stand near garden ponds?

Heron like to stand near garden ponds because they eat fish.

Birds in Your Garden

There are many different types of bird that you might see in your garden. Here are a few of them:

Robin

Robins are very noticeable in your garden. They have a red breast and a brown head and back. They have long legs and a short tail. They are very territorial. This means they live in one area and will defend it very aggressively if another robin tries to live there. They eat insects, fruit, seeds and worms.

Jackdaw

The jackdaw is a noisy bird. You would definitely notice this bird in your garden. They are quite large with grey at the back of their neck, a stubby beak and striking white eyes. They eat insects, dead animals, eggs, young birds and seeds. Jackdaws are known for stealing things; not just food but objects too!

Blue tit

The blue tit is a very small bird with bright yellow and blue feathers. They eat insects, caterpillars, seeds and nuts. They lay eggs between the end of April and May. They often eat from bird tables and live in garden nesting boxes. The male and female blue tits look the same. In winter, family flocks join up with other blue tits as they search for food.

Blackbird

Blackbirds are very common garden birds but they also live in farmland, woodland and near streets and coasts. They eat insects, worms, seeds and fruit. Blackbirds tend to be solitary birds. This means they do not live in flocks, but instead they live on their own. The male is glossy black with an orange beak and an orange ring around its eye. The female is less attractive, being dark brown with a brown beak. They nest in trees and their birdsong is easily recognised.

Heron

If you or your neighbours have a pond in their garden, you might see a heron either standing next to the pond or flying nearby. They love to eat fish and have been known to steal expensive fish from people's ponds! They are quite large, have a long thin beak, long spindly legs and long neck. When they fly, they stretch their legs out behind them and their neck is folded back. They nest in trees within colonies.

Questions
