## Government perform u-turn on free school meals after incredible work from Marcus Rashford

Boris Johnson has performed a u-turn on free school meals being available for many children in England thanks to a campaign from Marcus Rashford.

Rashford's campaign has now paid dividends as the government have confirmed an extra £120 million will be set aside for meal vouchers to those who need them this summer.

In addition, the 22-year old has raised a sixth of this figure for charity in recent weeks.

How much has Marcus Rashford raised for charity in recent weeks?

## Prince Harry loves a cheeky Nando's

According to reports, one thing Prince Harry seems to be really missing in his new life in the USA is Nando's! Harry is said to be a huge fan of everyone's favourite peri-peri chicken chain, but they don't have any restaurants in Los Angeles.

During a midnight visit to a London restaurant, the Prince once ordered a pitta with extra cheese and a side of creamy mash, along with a double chicken wrap with chips. He also got a soft drink and bottle of water. The cost of this order was £24.05.

But did you also know that David Beckham loves a McDonalds?!

In a previous edition of the Daily Rigour we revealed that David ordered a Big Mac medium meal and 2 cheeseburgers from a visit to a Drive-Thru.

A Big Mac meal costs £4.69 and a cheeseburger costs £0.99.

How much more change would Harry receive from £30 than David would from £10?

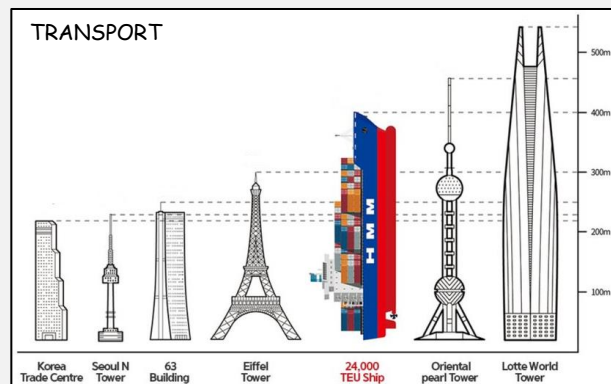

## World's largest container ship arrives in the UK for the first time

The world's largest container ship arrived in the UK for the first time. The HMM Algeciras delivered a variety of goods at DP World London Gateway in Thurrock and then left for China last Monday.

The vessel is 400 000 millimetres in length.

This is a whopping 10 000 centimetres more than the height of the Eiffel Tower.

How tall is the Eiffel Tower in metres?

## Man rides stationary bike for 297 hours to break Guinness record

A restaurant owner in Spain broke a Guinness World Record when he spent 297 consecutive hours riding a stationary exercise bike!

The man, who said his aim was to raise awareness of environmental causes, had to keep up a speed of at least 12 m.p.h. during his attempt and rode for a total of 12 days and nine hours. Included in this time was a 20 minute break every five hours to change his clothes and take a brief nap!

Assuming he cycled consistently at this minimum speed, what distance would he have covered in total for the duration of his attempt?
