

Health and Safety

READ THIS FIRST!

The Technical Department can be a dangerous place. You need to always be aware of both your safety and the safety of those around you!

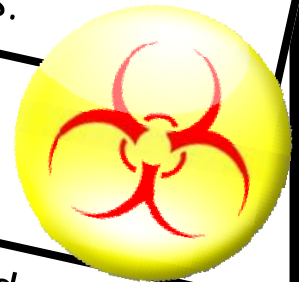

Your teacher will help you identify lots of possible safety hazards in the workshop however, your teacher can't be next to you all the time so you need to be able to recognise dangers on your own.

To help you develop a sense for safety we want you to look around your house and garden and identify **10** possible safety hazards.

Don't just look at things you use like....'The cooker gets hot!.... But think of tasks you do as well like'Climbing the stairs'.

For each hazard you can identify we want you to think of a safety rule to reduce the amount of risk. Be specific. Rules like 'Always be careful' don't count.!
