

Adult Guidance

What are we learning?

We are learning to find half of a group of objects.

How to set up the Challenge

- Place an even number of toys between you and your child.
- The number of objects can be changed each time, but there must always be an even number.

Halving Toys Activity

Ask your child the following:

- Count the toys. How many are there?
- Can you take half for yourself?
- Can you give your partner half the toys?
- How many do you both have?

Repeat this activity for different amounts of toys.

If your child is finding this task easy, here are some questions to get them thinking.

- What does half mean?
- Are you sure you have half?
- How can you check?
- What do you notice about both halves?
