

CONSTRUCT-A-CLOCK

To construct your own analogue clock face, follow these instructions:

1. Cut out the **clock face**, **minute hand**, and **hour hand**.
2. Lay one clock hand over the other and line up the white dots.
3. Using a split pin, pierce the clock hands through the white holes.
You may need an adults help for this!
4. Pierce the split pin (with the clock hands) through the black dot in the middle of the clock face.
5. Bend the arms of the split behind the clock face to secure the clock hands.
6. Now you can create any time on the clock!

MINUTE HAND

HOUR HAND
