| I can apply my knowledge of number facts to solve problems where an unknown value is represented by a symbol or letter. <br> MNU 2-15a <br> Having explored the need for rules for the order of operations in number calculations, I can apply them when solving simple problems. <br> MTH 2-03c |  |  |  |  |  |
| Over the next few weeks we are going to be learning to use expressions and equatio to: <br> - Know that solving an equation means finding the value of the required letter or symbol. <br> - Solve simple equations and inequations, e.g. $\mathrm{a}+7=17, \mathrm{~b}-9>10$ <br> - Explain how they solved an equation or inequation. <br> - Formulate simple equations and inequations that match the way they think about a problem. |  |  |  |  |  |
| Here are some ideas of how you can help me at home! <br> Solve Me 1 Ask children to create their own simple missing number questions. E.g. $4+?=16$ $8-?=7$ $?+14=19$ <br> Solve Me 2 Ask children to create a calculation with the answer underneath. <br> E.g. $\begin{aligned} 4+\mathrm{m} & =10 \\ \mathrm{~m} & =6 \end{aligned}$ $\mathrm{p}+10=90$ $18+s=22$ $\mathrm{p}=80$ $\mathrm{s}=4$ <br> Crocodile Signs Show the symbols for greater than and less than and remind children how to remember them- the crocodile who wants to eat the biggest number. <br> E.g. $8<26 \quad 38>5 \quad 6>2 \quad 5<3$ |  |  |  |  |  |
