

**Speed Distance Time**

Distance = Speed X Time or more simply **D = S X T**

Example .

A car travels at 50km/hr.

How far does it travel in 3 hours ?

Answers :

$$D = S \times T = 50 \times 3 = 150\text{km}$$

1 In the same way, find the distance travelled when :

(a)  $S = 9\text{km/hr}$        $T = 2\text{hr}$

(b)  $S = 20\text{km/hr}$        $T = 5\text{hr}$

(c)  $S = 90\text{km/hr}$        $T = 3\text{hr}$

(d)  $S = 220\text{km/hr}$        $T = 5\text{hr}$

Common fractions of an hour in decimal form are :

$$1/4\text{hr} = 0.25\text{hr} \quad 1/2\text{hr} = 0.5 \quad 3/4\text{hr} = 0.75\text{hr}$$

Example .

Find the distance covered by a bus travelling at a speed of 60km/hr for  $1\frac{3}{4}\text{hr}$

Answer :

$$3/4\text{hr} = 0.75\text{hr} \quad \text{So } 1\frac{3}{4}\text{hr} = 1.75\text{hr}$$

$$D = S \times T = 60 \times 1.75 = 105\text{km}$$

2 In the same way, find the distance travelled in the following :

(a)  $S = 84\text{km/hr}$        $T = 2\frac{1}{2}\text{hr}$

(b)  $S = 68\text{km/hr}$        $T = 1\frac{1}{4}\text{hr}$

(c)  $S = 92\text{km/hr}$        $T = 3\frac{3}{4}\text{hr}$

Speed = Distance/Time      or more simply       $S = D/T$

Example

Calculate the average speed of a car which travels 400km in 5 hours.

Answer :

$$S = D/T = 400/5 = 80\text{km/hr}$$

3. In the same way find the speed when :

(a)  $D = 50\text{miles}$        $T = 2\text{hr}$

(b)  $D = 400\text{metres}$        $T = 10\text{sec}$

(c)  $D = 1800\text{metres}$        $T = 60\text{sec}$

(d)  $D = 72\text{miles}$        $T = 4\text{hr}$

Example

A car covers a distance of 45km in 45min.

Find the average speed in km/hr

Answer :

$$45\text{min} = 0.75\text{hr}$$

$$S = D/T = 45/0.75 = 60\text{km/h}$$

4. Find the average speed in each of the following in km/hr:

(a)  $D = 50\text{km}$        $T = 30\text{min}$

(b)  $D = 8\text{km}$        $T = 15\text{min}$

(c)  $D = 54\text{km}$        $T = 45\text{min}$

TO CHANGE HOURS TO MINUTES

MULTIPLY BY 60

TO CHANGE MINUTES TO HOURS

DIVIDE BY 60

Example.

Change : (a) 0.8 hours into minutes

(b) 24 minutes into hours

Answers : (a)  $0.8 \text{ min} = 0.8 \times 60\text{m}$   
 $= 48\text{min}$

(b)  $24 \text{ min} = 24/60 \text{ hr}$   
 $= 0.4\text{hr}$

5 Change into hours :

(a) 12min (b) 36min (c) 15min (d) 54min (e) 40min (round to 2 dec plc)

6 Change into minutes :

(a) 0.1hr (b) 0.3hr (c) 0.9hr (d) 0.25hr (e) 0.66666hr

Example.

Change 4hours 20 minutes into hours rounding your answer to 2 decimal places.

Answer :

$20\text{min} = 20/60 \text{ hr} = 0.33333333\dots = 0.33 \text{ to 2 decimal places}$

So 4hours 20 minutes = 4.33hr

7 Change into hours :

(a) 2hr 24min (b) 3hr 45min (c) 1hr 12min (d) 5hr 45min

(e) 4hr 36min (f) 7hr 30min (g) 2hr 54min (h) 1 hour 6min

Time = Distance/Speed      or more simply       $T = D/S$

Example

A car travelling at 40mph covers a distance of 60 miles.

Find the time taken in (a) hours      (b) hours and minutes

Answer:

(a)  $T = D/S = 60/40 = 1.5\text{hr}$

(b)  $T = 1.5\text{hr} = 1\text{hr } 30\text{min}$       because  $0.5\text{hr} = 0.5 \times 60 = 30\text{min}$

8 Find the time taken in the following, giving your answers in hours

and then hours and minutes ;

(a) a distance of 25 miles at 20mph

(b) a distance of 350 miles at 200mph

(c) a distance of 180 miles at 80mph

(d) a distance of 660 miles at 240mph

9. The distance between two towns is 714km.

A train travels between the towns at an average speed of 140km/hr.

How long does the journey take in hours and minutes ?

10. A bus leaves Buchanan St Bus Station at 2.35pm .

It reaches Dundee 4.05pm

(a) how long did the journey take ?

(b) the distance from Glasgow to Dundee is 80miles.

Find the average speed of the bus in mph, rounding your answer to 1 decimal place.

11. A car journey lasted 2 hours and 36 minutes.

The average speed was 60 km/hr.

How far did the car travel ?

Example.

Gerry travelled a distance of 300 metres in 50 seconds.

(a) what was his speed in metres per second ?

(b) change this speed to km/hr

Answer :

(a)  $S = D/T = 300/50 = 6 \text{ m/sec}$

(b)  $S = 6 \text{ m/sec} = 360 \text{ m/min}$

$= 21600 \text{ m/hr}$

$= 21600/1000 \text{ km}$

$= 21.6 \text{ km/hr}$

X by 60 to find metres in 1 minute

X by 60 to find metres in 1 hour

Divide by 1000 to change m to km

12. Change these speeds from metres per second to kilometres per hour in the same way.

(a) 20 m/sec

(b) 50 m/sec

(c) 120 m/sec

(d) 14.2 m/sec

13. Aidan's travelled 70 km at 50 km/hr

Johnathan travelled 68 km at 56 km/hr.

Whose journey took longer and by how many minutes to the nearest minute ?

Mrs McLaughlin

Mr Mailley
