A student investigates how a crater is formed by dropping a marble into a tray of sand.

(a) The marble has a mass of 0.040 kg.

(i) Calculate the loss in potential energy of the marble when it is dropped from a height of 0.50 m.

3

*Space for working and answer*

(ii) Describe the energy change that takes place as the marble hits the sand.

- (b) The student drops the marble from different heights and measures the diameter of each crater that is formed.

The table shows the student's results.

<i>height (m)</i>	<i>diameter (m)</i>
0.05	0.030
0.10	0.044
0.15	0.053
0.35	0.074
0.40	0.076
0.45	0.076

- (i) Using the graph paper below, draw a graph of these results.

(Additional graph paper, if required, can be found on *Page twenty-eight*)

11. (b) (continued)

- (ii) Use your graph to predict the diameter of the crater that is formed when the marble is dropped from a height of 0.25 m. 1
  
- (iii) Suggest two improvements that the student could make to this investigation. 2
  
- (c) (i) Suggest another variable, which could be investigated, that may affect the diameter of a crater. 1
  
- (ii) Describe experimental work that could be carried out to investigate how this variable affects the diameter of a crater. 2
