# Money from around the world

## Activity sheet

As you visit each 'country', write down the price of the item in that currency in the left-hand column. Then, using the formula at the bottom of the page, calculate its equivalent in British pounds.

Cost of item in foreign currency	Exchange rate	Cost in British pounds
	1 British pound = 50 Thai baht	
	1 British pound = 90 Indian rupees	
	1 British pound = 20 Egyptian pounds	
	1 British pound = 2 Australian dollars	
	1 British pound = 25 Mexican pesos	

**Remember, to turn an amount of money in a foreign currency into pounds...**

$$\text{foreign currency} \div \text{exchange rate} = \text{amount in British pounds}$$

**For example: 180 Indian rupees  $\div$  90 = 2 British pounds**

Hint: To make the numbers easier to calculate, try dividing both numbers by 10.

$$180 \div 10 = 18 \quad 90 \div 10 = 9 \quad 18 \div 9 = 2$$
