

Natural Disasters Personal Project

Your task for this week is to research and complete a fact file on one of the natural disasters. Try to complete a piece of the fact file each day.

Step 1

Choose which weather hazard you will research. You could choose from tornadoes, hurricanes, earth quakes, volcanoes or you can choose one of your own.

Step 2

Find out the following information about the weather hazard using books, the internet, leaflets, television programmes or information from family and friends.

- What is it? Can you find out about some famous examples?
- Where in the world does it happen?
- What causes it?
- What damage can it do?
- How can people protect themselves against it?
- Explain how it is different from the weather in Scotland
- Include pictures or photographs to explain your work

Step 3

Once you have gathered all of your information make a booklet, leaflet, poster or power point about the weather hazard using writing, diagrams, pictures and photographs if you can.

Step 4

If you can, hand your homework project in on the Teams page for your classmates and me to see, have fun!
