## Probability

The chance of a particular event happening can be placed on a probability scale to show the chances of them happening. This scale goes from impossible to certain.

Impossible
Unlikely
Possible
Certain

Impossible - it will never happen
Unlikely - it may happen but probably not
Likely - it may happen and probably will
Certain - it will definitely happen

Can you match these events to the chance of them happening?
$\left.\begin{array}{|c|c|c|}\hline \text { It will rain cheese } \\ \text { tomorrow }\end{array} \begin{array}{c}\text { The sky will be above } \\ \text { your head on Friday }\end{array} \quad \begin{array}{c}\text { A horse will sleep in } \\ \text { your bed tonight }\end{array}\right\}$

Make your own list of at least 5 events for each chance of something happening.
